APPRECIATIONS

I am very glad to take this opportunity of expressing my appreciation of this excellent work, which, courageously undertaken in a time of great difficulties, has now been brought to its present successful issue.

No one will dispute the value of the services which a publication such as this renders to the great causes of education, of learning, and of science, which, by bringing together in one volume accurate and well-proportioned accounts of the activities of the great Universities of the world, its Academies, Observatories, Libraries, Museums, and Learned Societies, keeps in touch all those who in their different ways are seeking to extend the boundaries of knowledge. To do this is not only to render a service to Education; it is a service, and one of the most promising and fruitful, to civilization itself.

But, though the value of such a work will be readily admitted, not all those who so gladly utilise it can, I think, realise fully what the enterprise entails upon the editor and the publishers. To ensure accuracy — and as far as I have tested it this work is remarkably accurate — there must be countless communications between the editor and his correspondents all over the world, the closest scrutiny of the information received, and minute attention to detail on the part of editor and printer. And accuracy is not all. Vision and imagination are required, so that not only shall the multitudinous facts be accurate, but the facts shall be of the sort that are needed by the scholar, the administrator, and all concerned in the development of Higher Education.

In all these respects success has most decidedly been achieved, and I congratulate the editor and those associated with him on the results.

(Signed) : H. J. Waring.

Vice-Chancellor of the University of London

The Preface of the Rector of Paris makes it unnecessary to explain the nature and origin of this book.

The « Index Generalis » is a work almost indispensable to those in any country who desire information about the institutions of higher learning in other countries. The editors have undertaken under difficulties to supply a need, and they have shown energy and industry in a large task which they have brought to a successful conclusion.

The book is a necessity for every library of importance and of very great service to all teachers and students.

(Signed): Paul Van Dyke.

*Director of the American University Union,
Continental Division*

INTRODUCTION

The *Index Generalis* appears annually, and its first section (over 900 pages) is devoted to the constitution of the Universities, Technical School and Institutions of the whole world; the names of Professors and their subjects are given in detail. The later part of the book contains detailed information concerning the organisation of higher education in the principal countries and deals successively with the great Academies, Astronomical Observatories, Museums, Scientific Institutions and Learned Societies throughout the world. The important Libraries are also dealt with, and information is given of their addresses, days and hours of admission, and of any special features for which they are notable.

The *Index* contains more than 6,500 entries in all, and each entry is in the language of the source from which it arose, excepting those for a few countries of minor importance, which are in French. The information has been derived direct from the fountain heads by communication with the responsible officials. The work contains at the end a list of distinguished men who are willing to exchange original papers with fellow workers, and it is hoped that this may help to bring together research workers and learned men from all over the world for the exchange of ideas.

Care has been taken to make the typography accurate, and technical terms have been avoided where possible, but for such as are used short vocabularies have been made at the end of the book. Finally, an alphabetical list of more than 50,000 names enables the reader to locate immediately any one who comes within the scope of this book.

PRÉFACE

Il m'est particulièrement agréable de constater quelle place de plus en plus grande l'*Index Generalis* tient dans le domaine de la documentation scientifique.

C'est une œuvre de grande envergure.

Sa disposition heureuse montre avec une clarté toute française le rang de chaque pays au point de vue intellectuel : aucun subterfuge ne permet de croire que tel ou tel d'entre eux ait été avantageé et tel autre réduit à un niveau qui n'est pas le sien.

Il faut féliciter tout particulièrement l'auteur et les éditeurs de cet Annuaire, qui ont entrepris la lourde tâche, — au lendemain même d'une guerre qui transformait les peuples et remaniait la carte politique et universitaire du Monde, — de donner un tableau complet, constamment remis à jour, de l'Université nouvelle et des divers instruments de travail qui s'offrent aux savants : laboratoires, bibliothèques, observatoires, instituts scientifiques, musées, académies, sociétés savantes.

Je souhaite à l'*Index*, à cet incomparable instrument de travail si complet à la fois et si manuel, tout le succès qu'il mérite, comme œuvre intelligente d'un savant français et comme symbole des rapports toujours plus étroits qui doivent exister, dans le plan intellectuel, entre les peuples du monde et qui prépareront de la manière la plus sûre l'avènement de la véritable Société des Nations.

P. Appell.

BRITISH EMPIRE

English Universities and Institutions of Higher Learning

INTRODUCTION

It is not possible for us to give general information about the organisation of studies which would be applicable to all the British Universities, as we do in the case of those of France, Italy, Spain, and United States of America. We have taken as an example the University of London. Although, of course, each University has its own special character, the information which we give regarding the University of London may be taken as *generally* applicable to the others of the British Empire; but for details regarding any particular University, application should be made direct to its authorities.

GENERAL INFORMATION

I. — Constitution and Administration.

There are eight *Faculties* in the University, namely : — (1) Theology (2) Arts, (3) Laws, (4) Music, (5) Medicine, (6) Science, (7) Engineering and (8) Economics and Political Sciences (including Commerce and Industry). Membership of the Faculties is restricted to Teachers of the University who are admitted in the manner prescribed by the Statutes.

Boards of Studies exist for the various subjects of University study. Each Board consists partly of teachers of the subject and partly of external experts. There are at present forty-two Boards of Studies. The chief duties of the Boards are to report the Senate through the Academic Council and the Council for External Students, on matters relating to Appointment of Examiners, Courses of Study, and Regulations for Examinations.

The number of Appointed and Recognised Teachers in September 1924 was 1057 (including 233 Appointed Teachers); and the number of Registered Internal Students for the Session 1923-1924 was 8,948.

As a general rule, the Session at Schools of the University is divided into three terms. It begins in October and ends in June or July, with vacations of two or more weeks at Christmas and Easter. At the Medical the teaching year is usually divided into two Sessions, *viz.*, from October Schools to the end of March and from April to July.

II. — Admission of Students.

The following Students are registered by the University as "Matriculated students", *viz.*

(1) Students who have passed the Matriculation Examination of the University in its ordinary form, or who have passed the Senior School or the General School Examination in the subjects required by the Regulations for Matriculation, at one and the same Examination.

(2) Students who have passed the Examination before a Board of Examiners under statute 116.

(3) Students who have obtained exemption from the Matriculation Examination in accordance with the University Regulations and have paid a registration fee of three guineas.

The fee payable to the University at each entry to the Matriculation Examination is three guineas, with an additional local fee for candidates examined at Provincial Centres.

III. — Exhibitions and Scholarships.

A Student who desires information with regard to Exhibitions, Scholarships, Studentships, and Prizes awarded by the University, should apply to the University for a copy, of the Scholarships Pamphlet.

IV. — Degrees.

Before a Student is allowed to enter for the Final Examination for any Degree as an Internal Student, he must (unless admitted under Statute 125 after a two years' Course) have completed an Approved Course of Study extending over at least three years; and before a Student is allowed to enter for any Examination as an Internal Student, he must (unless special exemption has been granted to him) produce a Certificate of attendance at a Course of Study for the Examination, composed of Instruction Courses in all the subjects of the Examination.

A Candidate for the Doctor's Degree in any of the Faculties must have taken the Bachelor's Degree or the equivalent accepted under Statute 113 at least two years previously. Further, unless exempted by the Senate, a Candidate for the Degree of Doctor of Literature or Doctor of Science must have taken the Master of Arts or Master of Science Degree respectively or the Ph.D. Degree.

A thesis is usually required.

The usual fee for entry to an Intermediate or Final Examination is six guineas; and for the Doctor's Degree, twenty guineas. Exceptions to these rules, and the fees for other Examinations, are specified below.

Faculty of Theology.

The University confers the Degrees of Bachelor of Divinity (B.D.), Doctor of Philosophy (Ph.D.-Theology) and Doctor of Divinity (D.D.).

The Intermediate and Final Examinations are held in June.

Honours in Theology can only be taken after the Pass Degree in Divinity. The Honours Examination is distinct from the Pass Examination, and in the case of a Candidate who has taken the B.D. Degree as an Internal Student, a year's further course of study is not required. Honours may be taken in one subject only at any one Examination, but a Student may take Honours in other subjects not exceeding two at subsequent Examinations. The subjects for Honours are as follows — Hebrew and Aramaic including Syriac; Greek New Testament and Apocrypha; Church History; Biblical and Historical Theology; the Study of Religion.

A Candidate for the Ph. D. Degree must have previously graduated in the Faculty of Theology, Arts, Science, Engineering or Economics, or have been registered as a Candidate for the Degree under the terms of Statute 113 or Statute 129.

Candidates for the D. D. Degree must have taken Honours in Theology.

The Course in Theology may be taken at Hackney and New College, Hampstead; Regent's Park College; Kings' College Theological Department; Wesleyan College, Richmond; and St John's Hall, Highbury.

Faculty of Arts.

The University confers the Degrees of Bachelor of Arts (B.A.), Master of Arts (M.A.) Doctor of Philosophy (Ph.D.-Arts) and Doctor of Literature (D.Lit) A Diploma in Pedagogy, entitled the Teacher's Diploma, is awarded. Diplomas are also awarded in Fine Art, in Geography, for Journalism in Librarianship, in Psychology, in Slavonic Studies, in Town Planning and Civic Architecture, and in Town Planning and Civic Engineering.

Honours Students are not required to take the B.A. Pass Examination.

For the M.A. Degree a Thesis is required (except in Mathematics for which it is voluntary) and in some cases Candidates must have taken Honours at the B.A. Examination. The subjects in which the M.A. Degree is conferred are

as follows : — Classics; Archaeology; Mathematics; Mediaeval and Modern Languages; Oriental Languages; Comparative Philology; Philosophy; Psychology; History; Geography; Sociology; Education. The M. A. Examination is held in June and December (except in the case of Education, the Examination for which is held in June only) and the fee is 10 guineas.

A Candidate for the Ph. D. Degree must have previously graduated in the Faculty of Theology, Arts, Science, Engineering or Economics or have been registered as a Candidate for the Degree under the terms of Statute 113 or Statute 129.

The D. Lit. Degree is open to Masters of Arts and Doctors of Philosophy only unless special exemption is granted and is conferred for original work. The fee is 10 guineas.

The Course in Arts may be taken at University College; King's College; Royal Holloway College; Bedford College for Women; East London College; Westfield College; Birkbeck College; and Courses in Oriental Languages are provided at the School of Oriental Studies. Approved Courses in Arts subjects are given at other Institutions.

The Examination for the Teacher's Diploma in Pedagogy is open only to Graduates of this and other approved Universities and to others holding qualifications of a similar kind as set forth in the detailed Regulations. The Course for the Teacher's Diploma extends over at least one year. The Examination for the Teacher's Diploma is held in July; fee, six guineas.

The Course in Pedagogy may be taken at King's College; London Day Training College; Maria Grey Training College; St Mary's College.

Faculty of Laws.

The University confers the Degrees of Bachelor of Laws (LL. B.) Master of Laws (LLM.) and Doctor of Laws (LL. D.)

The LL. B. Examination is held in July and the LL. M. Examination in December.

Candidates for the LL. D. Degree must have taken the LL. M. Degree, unless specially exempted.

Approved Courses in Laws may be taken at University College, King's College, and the London School of Economics, under a joint scheme.

Faculty of Music.

The University confers the Degrees of Bachelor of Music (B.Mus.) and Doctor of Music (D.Mus.)

All the Examinations in the Faculty of Music are held in December.

Approved Courses in Music are provided at the Royal Academy of Music; the Royal College of Music; Trinity College of Music; Battersea Polytechnic; and Chelsea Polytechnic.

Faculty of Medicine.

The University confers the Degrees of Bachelor of Medicine and Bachelor of Surgery (M. B., B. S.), Bachelor of Dental Surgery (B. D. S.) Bachelor of Pharmacy (B. Pharm.), Doctor of Medicine (M. D.) and Master of Surgery (M. S.).

The Course in Medicine extends normally over five and a half years. In the first year Courses in Inorganic Chemistry, Physics, and General Biology, in preparation for the First Examination for Medical Degrees are taken, the Examination being held in July and in December, (fee 6 guineas). Organic Chemistry is studied (with the subjects of the Course for the Second Examination for Medical Degrees, Parts I and II), in the first half of the

second year, and is the only subject at Part I of the Second Examination, taken normally six months after passing the First Examination, the Examination being held in March and July (fee, 3 guineas). The second and third years are devoted to Organic Chemistry (as explained above), Human Anatomy and Embryology, Physiology, Pharmacology, and the Second Examination for Medical Degrees, Part II (fee, 9 guineas), is normally taken two and half years after Matriculation, the Examinations being held in March and July.

In the Final Course for the M. B. B. S. Degrees (the two Degrees must be taken together), the subjects are Medicine, Surgery, Obstetrics and Gynecology, Pathology, Forensic Medicine and Hygiene. The M. B., B. S. Examination (fee, 12 guineas) may be taken in two Groups (fee, six guineas for each Group), and is held in May and October.

The M.D. Degree may be taken in any of the following Branches : — (I) Medicine, (II) Pathology, (III) Psychological Medicine, (IV) Midwifery and Diseases of Women, (V) State Medicine, (VI) Tropical Medicine. The M.S. Degree may be taken in any of the following Branches : — (I) Surgery, (II) Dental Surgery, (III) Ophthalmology, (IV) Laryngology, Otology, and Rhinology. For the M.D., or M.S. Degree a thesis may be submitted, and may be accepted as exempting from a part or from the whole of the Written Examination, and (a) in the case of Pathology, from the Practical Examination also, and (b) in the case of Tropical Medicine, only from the paper in Medicine and the Essay.

Courses for the First Examination for Medical Degrees are also provided at the Medical Schools (except Westminster, St. George's, Charing Cross, and King's College Hospitals) and at several other Institutions. Students of the Medical Schools of Westminster, St. George's, Charing Cross and King's College Hospitals attend one of the University Centres (University College and King's College) for Courses in Preliminary and Intermediate Medical Studies.

The Course in Dental Surgery extends normally over five years. In the first year Courses in Inorganic Chemistry, Physics, and General Biology in preparation for the First Examination in Dental Surgery are taken, the Examination being held in July (fee, six guineas). The subjects of the Second Examination are Anatomy, Physiology, Special Anatomy and Histology, Pharmacology. It is taken normally seventeen months after the First Examination, and is held in December (fee, six guineas). The Third Examination is in two parts, and the Course extends over one and a half years. The subjects of Part I are Pathology and Bacteriology, Medicine and Surgery and of Part II, Prosthetic Dentistry, including Dental Metallurgy. Part I is held in March (fee, six guineas), and is taken normally fifteen months after the Second Examination; Part II is held in June (fee, two guineas), and is taken eighteen months after passing the Second Examination. In the Final Course for the B. D. S. Degree the subjects are Dental Surgery, Operative Dental Surgery, and Orthodontics. The Examination is held in July (fee six guineas), and is taken normally one year after Third Examination.

Faculty of Science.

The University confers the Degree of Bachelor of Science (B.Sc.), Master of Science (M.Sc.), Doctor of Philosophy (Ph. D. Science), and Doctor of Science (D.Sc.); also the Degree of B. Sc. (Agriculture), M.Sc. (Agriculture), B.Sc. (Horticulture), M.Sc. (Horticulture), B.Sc. (Veterinary Science), M.Sc. (Veterinary Science), B.Sc. (Household and Social Science), and B.Sc. (Estate Management).

For the B. Sc. (General) Examination any three subjects may be selected from the following, *viz.*, Pure Mathematics; Applied Mathematics; Astronomy; Physics; Chemistry; Geology; Botany; Zoology; Physiology; Psychology, General and Experimental; Anthropology; Geography; Military Science; Statistics.

A candidate for the B. Sc. (Special) Degree is required to take one of the must also take a Subsidiary Subject or Human Anatomy and Morphology. The general Examination is distinct from the special Examination, but at both examinations the successful candidates will be awarded first Class Honours, Second Class Honours, or a Pass.

Under certain circumstances to be approved by the Senate, and as an exceptional and strictly supervised means of access to an Honours Degree only, Candidates who have passed the Intermediate Examination may be permitted to proceed to the B.Sc. Degree "by Research".

Bachelors of Science may, after the prescribed interval, proceed by Thesis and Examination to the M.Sc., Ph.D., and D.Sc. Degrees in Science.

The M.Sc. or Ph.D. Degree may be taken in a Branch of Science within the purview of the Faculty of Science. A Thesis is required in all Subjects, except in Mathematics, for which it is optional.

The Course in Science may be taken at University College; King's College; Imperial College; Royal College of Science; Royal Holloway College; Bedford College for Women; East London College; and Birkbeck College. Approved Courses are provided at Westfield College and at other Institutions.

For the B.Sc. Degree in Agriculture the subjects of the Intermediate Course are Chemistry; Botany; Zoology; and one selected subject. The subjects of the Final Course are Agriculture; Agricultural Chemistry; Agricultural Botany; and two selected subjects. For the B.Sc. "by Research" in Agriculture the conditions are the same as for Science (*see above*).

The Course in Agriculture may be taken at the South-Eastern Agricultural College, Wye.

The Course for the B.Sc. Degree in Horticulture extends over three years and consist of training in Practical as well as Scientific Horticulture. The subjects of the Intermediate Course are Chemistry; Botany; Zoology; Applied Physics; Surveying; Geology. The subjects of the Final Course are Practice and Principles of Horticulture; Bookkeeping; Entomology.

The Course for the B. Sc. Degree in Veterinary Science extends over four years, and there is an Examination, at the end of each year of the Course.

Approved Courses in Veterinary Science are provided at the Royal Veterinary College.

Detailed Regulations for the M.Com. Examination will be published later.

Bachelors of Science in Agriculture, Horticulture, or Veterinary Science may, after the prescribed interval, proceed by Thesis and Examination to the M.Sc., Ph.D., and D.Sc. Degrees in Science.

The B.Sc. Degree in *Household and Social Science* is open to Internal Students only. The Course extends over three years and gives the preparation for Students who may intend to enter upon professional careers as either Teachers of Household Science, or as Institutional Administrators.

The B.Sc. Degree in Estate Management is open to External Students only.

Faculty of Engineering.

The University confers the Degrees of Bachelor of Science (Engineering) (B. Sc.), Master of Science (Engineering) (M. Sc.), Doctor of Philosophy (Ph. D.), Doctor of Science (Engineering) (D. Sc.), Bachelor of Science (Mining) (B. Sc.), and Bachelor of Science (Metallurgy) (B. Sc.).

The Intermediate Course in Engineering is taken by all the Students in the Faculty, whether they intend to take the Degree in Engineering, Mining, or Metallurgy. The subjects are: — (1) Pure Mathematics; (2) Applied Mathematics; (3) Heat, Electricity and Magnetism; (4) Engineering Drawing and Design; and (5) one of the following subjects: — Sound and Optics; Chemistry; Geology. Five subjects are taken in the Final Course in Engineering, a wide choice being allowed. In the Final Courses in Mining and Metallurgy, six subjects are required.

Faculty of Economics.

The University confers the Degrees of Bachelor of Science (Economics) (B.Sc.) Master of Science (Economics) (M.Sc.), Doctor of Philosophy (Eco-

nomics) (Ph.D.), and Doctor of Science (Economics) (M.Sc.), also the Degrees of Bachelor of Commerce (B.Com.) and Master of Commerce (M.Com.). Academic Diplomas are awarded in Geography, and in Sociology and Social Administration.

For the B. Sc. "by Research" in Economics the conditions are the same as for Science (*see* p. 8.)

Bachelors of Science in Economics may, after the prescribed interval, proceed by Thesis and Examination to the M.Sc., Ph.D., and D.Sc. Degrees in Economics.

The Course for the B.Sc. Degree in Economics may be taken at University College, and the London School of Economics. Approved Courses are also provided at King's, Birkbeck, and City of London Colleges.

Commerce.

The Course for the Bachelor's Degree (B.Com.) extends over three years and must be taken at the London School of Economics and Political Science.

The Intermediate Examination is divided into two parts which may be taken on the same or on different occasions.

The subjects are : — Part I (1) Element of Economics; (2) Geography; (3) an Approved Modern Language. Part II (1) (a) Accounting as applied to Traders and Trading Companies, or (b) a second Approved Modern Foreign Language; and (2) Modern Economic Development of the Empire of the Following : — an Approved Modern Foreign Language, Chemistry, Physics, Geology, Botany, Pure Mathematics Applied Mathematics, History, English, Art in relation to Commerce, Psychology.

The B.Com. Examination is divided into two parts, Part I consisting of the Compulsory Subjects, and Part II being the Selected Group of Subjects.

The Subjects are : — Part I : (1) The Present Organisation of Industry, Banking, Trade and Transport; (2) Modern Economic Development of the Great laws; (3) Elements of Commercial Law; (4) Statistical Method (5) One Part II : One Group of Subject selected from the following; — a) Banking and Finance; (b) Trade (Colonial and General); (c) Trade (a definite area); (d) Industry; (e) General Transport; (f) Shipping; (g) Inland Transport; (h) Public Utilities; (i) Art in relation to Commerce.

Candidates for the Sc. Com. Degree must have had practical commercial experience for not less than 2 years after passing the B.Com. Examination. The Sc. Com. Examination consists of written papers, an oral examination and a dissertation or thesis.

V. — Incorporated Colleges, Schools and Institutions.

University College, and King's College and King's College for Women are incorporated in the University.

Certain public educational institutions are recognised as Schools of the University in one more of the Faculties.

Students of an incorporated College or School of the University are allowed to enter as Internal Students for the Examinations of the University in the Faculty in which the School is recognised, after taking an Approved Course of Study consisting of Approved Instruction-Courses in all the subjects of the Examination. Students of other Institutions are also allowed to enter as Internal Students for the Examinations of the University, provided they have attended satisfactorily approved Instruction-Courses in all the subjects of the Examinations given by Recognised Teachers of the University.

King's College, East London College, the London School of Economics, Birkbeck College, and a considerable number of the Institutions provide instruction in the evening. The Theological Schools, and some of the Medical Schools are for Men Students only. The London (R. F. H.) School of Medicine for Women; King's College for Women, Household and Social Science Department; Royal Holloway College; Bedford College for Women and Westfield College are for Women Students only. The Royal Holloway College and Westfield College are mainly residential, and Bedford College for Women and the London School of Medicine for Women provide accommodation for a number of resident Students. The Royal Holloway College at Egham, the Wesleyan College at Richmond, and the South Eastern Agricultural College at Wye are outside the administrative County of London, but were named as Schools of the University by the Statutes.

UNIVERSITY OF LONDON

University College (1826).

University College provides Courses in the Faculties of Arts, Laws, Science Engineering, and Economics, and in the Faculty of Medicine in the subject of Hygiene. The College is one of the University Centres for Preliminary and Intermediate Medical Studies. Open to Students of both sexes.

Fees — Composition fees for Students taking the Three Sessions' Course in the Faculty of Arts (without Science Subjects and except Architecture), 98 guineas. B. A. Architecture Course, 228 guineas. M. A. Course, two Sessions' Course, 21 guineas; one Session' Course 14 guineas. Faculty of Science B. Sc. Course, complete Course, 135 guineas. M. Sc. Course, two Sessions' Course, 28 guineas; one Session, 21 guineas. M. Sc. Course in Pure Mathematics, two Sessions' Course, 21 guineas; one Session, 15 guineas. The fee for the three Sessions' Course in Engineering is 168 guineas. M. Sc. (Engineering) Course, 24 guineas. Faculty of Economics : B. Sc. Course 21 guineas each Session. Faculty of Medicine : First Examination for Medical Degrees, 35 guineas; Second Examination, 80 guineas; Conjoint Board first Examination (Pts. I, II, III), 29 guineas. First Examination (Pt. IV) and Second Examination, 80 guineas. Faculty of Laws : Sessional Composition fee, 18 guineas. Sessional Composition fee to Students in the Slade School of Fine Art 28 guineas. Students paying any of the foregoing fees are entitled to the privileges of one of the Students' Unions without further payment.

The Libraries are classified as follows :

a) The General Library of the College is used as a Reading Room, whilst access to the special libraries mentioned below is confined to Senior Students. In the General Library are housed the Whitley Stokes Library of Celtic Philology, the Blackburn and Quain Law Libraries, the Field Fine Art Library, the Ricardo Library of Political Economy, the Barlow Dante Library, the Strong Oriental Library, the Library of American Institution, Government and Literature presented by the Carnegie Endowment for International Peace, and the Graves Mathematical Library. This latter contains 15,000 books and pamphlets relating to Mathematics, Physics and Astronomy.

b) The Arts Libraries comprise : The Yates Archeological Library, the English Library, the German Library, the Scandinavian Library, the History Library, the Romance Library, the Classics Library, the Philosophy and Psychology Library, the Mocatta Anglo-Jewish Library, and in close connection with their respective departments, the Edwards Egyptological Library, the Geographical and Phonetics Libraries, and the Library of the School of Librarianship.

c) The Science Library, which includes the Library of the Geologists' Association, now transferred to the College, and the periodicals deposited at the College by the British Association.

d) The Medical Sciences Library, including the Biological Library bequeathed by Professor Sharpey.

The College possesses the following Museums: Anatomy, Botany, Egyptology, Geology and Mineralogy, Philosophical Apparatus, *Materia Medica*, Chemistry, Geology, Engineering, besides collections of instruments in the departments of Pure and Applied Mathematics.

UNIVERSITY OF LONDON

King's College (founded 1829).

(Incorporated in the University on January 1st 1910, under the Order of Commissioners appointed by the King's College London (Transfer) Act, 1908). The College is divided into two distinct parts under different Governing Bodies, one of which is a Delegacy of the University of London, the other is the Council of King's College. King's College provides Courses in the Faculties of Arts, Laws, Science, Engineering, and Economics, and in Preliminary and Intermediate Medical Studies in the Faculty of Medicine. The College is one of the University Centres for Preliminary and Intermediate Medical Studies. All classes are open to Women as well as Men. The Council of King's College remains the Governing Body so far as the Department of Theology is concerned, which Department is by the Act constituted a School of the University.

Composition fees in the several Faculties— Theology, £ 30 per annum; Arts, 30 guineas per annum, evening classes £ 10; Laws, 18 guineas per annum; Science, 50 guineas per annum, evening classes £ 10; Course for First Examination for Medical Degrees, 35 guineas; for Second Examination 40 guineas; Engineering, 60 guineas per annum.

The Teachers' Training Department includes (1) a Day Training College (Men only) under the Board of Education, (2) a department for Training Secondary Teachers. Courses in the Faculties of Arts and Science are taken in the College.

Scholarships, Exhibitions and Prizes are offered annually to the value of about £1,500. The Library is open, without fee, to all Regular Students. Special Libraries: — Medical; Marsden (Philological and Oriental); Sir Charles Wheatstone (Physics). Museums: — King George the Third (Historical Collection of Models and Instruments and Modern Physical Apparatus); Natural History, Minerals, etc.; Anatomy and Pathology; *Materia Medica*. Research is continually carried on in the various Laboratories, and every facility is afforded to Students who are competent to undertake such work. The Platanes, Denmark Hill, S.E., has been opened as a Hall of Residence for Medical and other Students and a Hostel for Women Students has been opened at Queensborough Terrace, Bayswater.

UNIVERSITY OF LONDON

King's College for Women

Courses in the Faculties of Arts, Science, and Divinity are given at King's College. The Household and Social Science Department provides Courses in preparation for the B.Sc. Degree Household and Social Science: fee, 45 guineas a Session.

INCORPORATED INSTITUTIONS AND UNIVERSITY DEPARTMENTS.

Post-graduate Study and Research.

One of the most important of the purposes of the University of London as defined in the Statutes, Section 3, is "*to promote research and the advancement of science and learning*". The metropolis with its Libraries, Archives, and Museums, has great advantages as a centre for higher study and research, and the Senate, since the re-constitution of the University in 1900, have taken an active part in the organization of facilities for work of this kind.

Laboratories :

The Brown Animal Sanatory Institution, 149 Wandsworth Road, Vauxhall London, S. W.; Superintendent : F. W. Twort.

The Francis Galton Laboratory for National Eugenics, at University College. Director : Prof. K. Pearson.

Inquiries are frequently addressed to the University regarding the expenses connected with a course of study at the University as an Internal Student. A *satisfactory estimate of the average cost of living for Students in London cannot at present be made*, but it may be said that expenses can readily be adapted to the tastes and means of individual Students. The cost of living will depend on the part of London in which the student proposes to live, and this again may depend to some extent on the School of the University at which he is studying. The principal expenses connected with the University Course, other than expenses for books, subscriptions, travelling and vacations, etc., are as follows

Tuition Fees. — These vary considerably, according to the School or Institution to which the Student is attached and according to the Faculty in which he proposes to graduate.

Examination Fees, payable to the University for entry to Examinations. — The minimum expense in fees for a first degree (including Matriculation, is 15 guineas. In the Faculties of Medicine and Science (Veterinary Science), the total expense under this head will amount to more than 15 guineas. If a Student fail at any of the Examinations, there will be an additional fee for re-examination.

Regulations. — The following publications may be obtained postfree on application to the University :

Regulations for Matriculation.

Regulations for Internal and for External Students (published separately) for Degrees in Theology, Arts, Laws, Music, Medicine, Dentistry Pharmacy (*Internal only*), Science, Agriculture, Horticulture, Veterinary Science, Household and Social Science (*Internal only*), Estate Management (*External only*), Engineering, Mining and Metallurgy, Economics, Commerce, for the Teacher's Diploma, and for the Diploma in Fine Art, the Diplomas in Town Planning and Civic Architecture, and in Town Planning and Civic Engineering, the Academic and External Diplomas in Geography, the Academic Diploma in Sociology and Social Administration, the University Diploma in Librarianship, the Academic Diploma in Slavonic Studies, the Academic Diploma in Psychology, and the Diploma for Journal sm. Also Regulations for Ph. D. Degree.

Scholarships Pamphlet, containing particulars of Exhibitions and Scholarships awarded by the University and by Schools of, and other Institutions connected with the University.

Applications for any of these publications should be addressed to the Principal Officer, University of London, South Kensington. S.W.7.

University Libraries.

The University possesses the following Libraries, viz : (1) The Libraries at the Central University Building at South Kensington (100,000 volumes), including the General Library, the Lady Welby Library, and the Goldsmith's Company's Library of Economic Literature; (2) the Libraries at University College, Gower Street, W. C. (108,000 books and 19,000 pamphlets); and (3) the Libraries of other Institutions incorporated in the University.

UNITED STATES

THE AMERICAN UNIVERSITIES.

For the most part, there have been included in this volume only those American Universities, Colleges and Technical Schools which both appear on the official list of the Association of American Universities (Carnegie Foundation) and prepare for the Masters and Doctors degrees.

An account, at the same time brief and adequate, of the American institutions of higher education, is rendered practically impossible by the endless variety of their types. There are in the United States more than five hundred universities, colleges and technical schools, which claim to give instruction going beyond that of the secondary schools. To be sure, a considerable number of these institutions are generally admitted to offer training scarcely superior to that of the best equipped High Schools; nevertheless, even disregarding such institutions, there remains a very large and varied group. In an effort to establish some standards of evaluation, the Carnegie Foundation made an investigation a few years ago which resulted in the publication of a list of 119 universities, colleges and schools whose degrees of Bachelor of Arts and Bachelor of Science were recognised as of such standard value that they were recommended as fulfilling the prerequisites for graduate work. This list is printed in the 1913 proceedings of the Association of American Universities. Even taking this list as the basis of our study, it will be found that scarcely two universities, colleges or technical schools are exactly alike in their history, in their charters or constitutions, or in their internal organization, ideals and objects.

The origin of American institutions of higher education is extremely diverse. All the oldest of them have been founded by various religious sects, especially the dissenting Protestant sects, as schools for the training of their clergy and as centers of the liberal education of a laity always imbued with the general spirit of the sect maintaining the particular school. However, in the general evolution of education in the United States, many of these schools, founded by ecclesiastical organization, have completely lost their sectarian bias; so much so that few Americans today, in thinking of Harvard, Yale or Princeton, recall that the two former colleges were founded by the Pilgrims and their descendants and the latter by the Scotch Covenanters and Quakers. They have become strictly scientific institutions. The spirit of the old religious traditions still lives on only in the great emphasis laid on the formation of character as one of the essential functions of a university or college, a function quite as important as intellectual training.

The institutions of higher education, established and maintained by the different states, have so increased in number since 1830 that there is now scarcely a state which has not its own university and technical schools. In the Central and Western states, these states universities and schools are usually more largely attended and exert a greater influence on the intellectual life of the community than the endowed institutions.

There is also a large number of universities, technical schools and institutions for the promotion of research work, established by private initiative and supported by private munificence, but entirely independent both of ecclesiastical organizations and the state. They offer for the most part the highest type of scientific training. In this group fall not only the Johns Hopkins University, the University of Chicago and Leland Stanford Jr. University, but also the Rockefeller and Carnegie Institutes.

The great variety of higher schools in the U. S. is explained, on the one hand, by the great diversity of their origin, on the other hand, by the fact that the U. S. constitution, imbued with the principle of States Rights, en-

trusts the entire task of education (as it entrusts the solution of so many other problems considered in Europe as strictly national questions) to the individual states. The government at Washington exercises no control whatsoever over education, whether primary, secondary or higher. Education is not yet recognised in the cabinet of the President by a separate portfolio : there is no higher council of education with administrative powers. The entire influence of the Central government on education is exercised indirectly through the Bureau of the National Commission of Education, a Bureau which has proved very valuable in gathering statistics about education in America and in cooperating in the standardizing and developing of universities and schools, but which has no administrative control over any of them. There are no higher schools established and controlled directly by the U. S. government except the U. S. Military Academy at West Point and the Naval Academy at Annapolis.

Even in the various states, the control exercised by the state government over the local institutions of higher education, especially those not belonging to the state, is very slight. Universities like Harvard, Yale, Princeton, Columbia, the University of Chicago and Leland Stanford Jr. University, are practically entirely independent of the local state administration within whose jurisdiction they find themselves. To be sure, in return for specific services rendered, for specific kinds of instruction undertaken, some state governments have granted to endowed universities and schools state aid; and this first step has led in several cases to a close cooperation between the state and the local higher schools. However, not even for the state universities and technical schools themselves is there always one central administration. More frequently each higher school is administered by its own board of trustees or council of administration. And these different boards or councils are usually not responsible either to the State Superintendent of Public Instruction or to a supreme state board of education.

It might seem that this absence of a central control and administration of higher education must result in complete anarchy. And it must be admitted that, from the standpoint of the more precise educational values and more systematic organization of higher education in most European countries, the American educational system lacks uniformity and definite standards. However, our higher education is far from being a chaos. Various voluntary associations of schools of various types, such as the Association of American Universities, the Association of American Colleges, the Association of American Professors, etc., exert a tremendous indirect influence towards standardizing the conditions of entrance to the higher schools, their courses of study, the quality of their instruction, the requirements for degrees, etc., and towards the permanency of appointments.

As a general rule, the final responsibility for the administration of each university or higher school rests in the hands of the particular social group which has created it. In the case of the state universities, the members of the board of trustees, board of regents or university council are usually either elected at large by popular vote, as are the judges of the state supreme courts, or appointed by the governor of the state. In either case the final responsibility for the choice of the governing board rests with schools; the nucleus of the governing board is constituted by a group of members which is self-perpetuating. However, there has been a strong tendency for many years to give to the alumni a larger and larger voice in the choice of the governing board; so that today in the older endowed universities like Harvard, Yale, Columbia and Princeton, the alumni elect at least a part of the members of the governing board, or elect an advisory council which cooperates with this board in the direction of the university. In only a few universities and colleges of strong sectarian nuance is the governing board elected or appointed by the governing body of the church to which it belongs.

The board of trustees, board of regents, corporation, or whatever the governing body is called, is charged with the direct administration of the institution. If, as at Harvard University, there are two governing bodies, the Board of Overseers, elected by the alumni, and the Corporation, a self-perpetuating body, the former usually has the power of approval and confirmation, but the final decision rests with the latter. It is this board which elects the President, approves finally the appointment of all members of the administrative and teaching staff, makes up the budget, administers the

finances and even exercises, through committees of its own members or others invited to serve, a supervision of the internal affairs of the institution. The members of most self-perpetuating boards are elected for life; the members of boards elected by the alumni or by popular vote of the people, or appointed by the governors of the states, on the contrary, usually hold office five or six years with the possibility of re-election.

The president or chancellor of an American university, college or technical school is not only the titular head of the institution and its formal representative in the educational and general social world; he is also usually the active driving force in its life, the initiator of its policies and the moulder of its fortunes. He is expected to combine the administrative and financial ability of the man of affairs with the intellectual acumen of the scholar. For upon him depends not only the direction of the educational policy of the institution but also the administration of its business and financial affairs. If the institution is privately endowed, the president must see to it that, through appeals to the generosity of his alumni and friends the endowment is increased to meet the growing needs of modern educational requirements. If the institution belongs to the state, he must be able to present its claims before the state legislature, in whose hands alone rests the power of voting the funds necessary for its maintenance. An able American university or college president can change, mould and determine the character of his school to an extent scarcely realizable by the head of a European institution of higher education.

In the determination of all questions of internal organization and educational policy, the president consults either a Senate, which is usually composed of the titular professors of all faculties and schools, or a University Council, made up of a number of professors elected by the various faculties. This Senate or University Council acts as the legislative body of the institution and can often modify or even thwart the plans of the president. However, the relation between the power and authority of the president and that of the Senate or Council is extremely variable: in some institutions the president can both legally and by tradition impose his will upon the Senate or Council, in others the Senate or Council can limit very definitely the president's power.

In all institutions which are composed of more than one college or department or school, there are as many deliberative bodies called faculties as there are colleges or schools, each faculty composed of all the titular professors in its own group. Other members of the teaching staff who have not the title of professor are usually invited to sit in at the meetings of their own faculty, and have the right to speak, but not to vote. Each faculty legislates with reference to and decides all questions touching its own internal affairs.

Each college or school has its own dean or director who is occasionally elected by the members of the faculty over which he presides, but more often is appointed by the president with the approval of the governing board. The dean usually exercises a very considerable influence and power, not only in the organization of the courses and the direction of the policy of his faculty or school, but also in the appointment of heads or chairmen of departments of study and of members of the teaching staff.

Until a few years ago, all the work in a particular department of study as Romance languages or philosophy, was under the direction of one professor who was responsible for the organization of the studies of his department and the scholastic results obtained. He also exercised a great influence in the choice and advancement of the members of the teaching staff in his particular group of studies. There has, however, manifested itself a strong tendency during the past few years to modify this system which permits of considerable arbitrariness, especially in the selection and advancement of professors, and to substitute for it a system much more democratic, in which each member of the departmental staff has an equal voice. In this new system the head of the department becomes merely the chairman of the group. In some institutions the chairmanship rotates among the different members of the department.

The history of higher education in the United States for nearly a hundred and fifty years was a history of its colleges. Not until the close of the American Revolution were studies in theology, medicine, law and science either

separated from the regular curriculum of the Arts college to constitute a new professional faculty or school or were new faculties created to this same end.

As has been already remarked, the American colleges were nearly all established by different religious sects to train an educated clergy and, at the same time, to furnish a liberal education for the laity to the end of raising up a group of young men who might not only justify and defend the faith, but also assume the responsible positions of public life. The ideal of a broad, cultural education with a strong emphasis on the formation of character and preparation for public life, was a continuation of the English tradition. And even today, in spite of the difference in the details of internal organization, the American colleges resemble more closely the colleges of Oxford and Cambridge in their spirit and ideals than any other existing group of schools. This ideal of a cultural education explains the wide range of subjects offered and the freedom of choice allowed the student. It also explains the effort constantly made by college authorities to create and develop within the college a social life broad and varied enough to take account of all the tendencies of youth and to give them adequate expression without the danger of their becoming perverted. Hence, the great encouragement given to athletic sports, debating societies, oratorical contests, amateur theatricals and social clubs and fraternities. The man with a « college education » should be a cultured gentleman with a wide range of knowledge and broad sympathies. He should be rather a highly socialized individual than a technically and exactly trained intellect. In this ideal is seen the influence of the English tradition.

Many professional schools in the U.S., especially schools of medicine and law, in requiring a college education as the condition of admission to their courses, have imposed upon the Arts college a new ideal, the preparation through undergraduate courses for entrance upon professional studies. This new demand has modified considerably the old ideal of a college education as a liberal training in literature, the sciences and the arts. Unwilling to accede to the new demand, a goodly number of American colleges have deliberately determined to continue the old tradition and to remain the repository of the old ideal. They do not *wish* to be transformed into universities.

Admission to American colleges is either by examination or by diploma from a recognised High School or college preparatory school. Several of the older universities of the East admit to their college department only on examination, though there is now a marked tendency to grant at least partial credit for admission on the basis of diplomas or recommendations. Each state university admits on the diploma of the approved High Schools and college preparatory schools within its own territory and even extends the courtesy to schools approved by sister state universities.

Since the American Revolution a considerable number of the older colleges, such as Harvard, Yale, Columbia and Princeton have created new faculties and schools either by separating groups of studies formerly incorporated in the regular college curriculum or by establishing new chairs and courses. Thus have the older colleges been transformed into universities with faculties of medicine, law, science, etc. The state universities, on the contrary, being for the most part of more recent origin, have not developed out of colleges, but were originally created as institutions comprising several faculties of which the Arts college is only one, though usually playing the most important role. In proportion as the American universities have grown they have added to themselves new faculties and schools. In fact, a very marked tendency in American higher education is to incorporate within the university, as an integral element in its constitution, each new intellectual interest, branch of research or group of studies, as soon as it fully makes good its claim to recognition, instead of creating for it a special school. This tendency is in marked contrast with the European practice, especially as exemplified in France. Thus the American university comprises not only the older faculties and schools of European universities, but also schools of commerce or business administration, of engineering, of mines, of architecture, of philanthropy, of agriculture, conservatories of music, normal training schools, etc.

In most American universities, a very marked distinction exists between undergraduate or college studies and courses on the one hand, and graduate

professional and technical work, on the other. The college embodies the spirit of general culture, of broad but not very sharply defined interests. A college education offers to many a student an opportunity to find himself, to discover his particular bent and the wide and varied range of subjects of study offered further this end. The graduate, professional and technical schools, on the contrary, presuppose the final choice of a profession on the part of the student and offer most rigidly required courses. All graduate schools, and a very large number of professional schools, require the completion of the college course as the prerequisite for enrollment in their courses. However, in the matter of the amount of completed college work required for admission to a professional or technical school, there is a great deal of variation in different universities.

The normal American college course comprises four years of study and leads in most colleges to the degree of Bachelor of Arts only. In some colleges, where a considerable number of courses in science is offered, the student, on completing satisfactorily the required work, receives either the degree of Bachelor of Science or Bachelor of Arts according to whether or not he has chosen more than half his courses in science. In some colleges these degrees are given with honors or special mention in a certain subject or group of subjects indicating the student's special interest and aptitudes. Some colleges also confer, along with the bachelor's degrees, a teacher's diploma, a recommendation or licence to teach, to such students as have shown marked proficiency along certain lines of study and have completed successfully certain specified courses.

The graduate school, which offers advanced courses and opportunities for research along the main lines of study in the curriculum of the college, usually confers only two degrees, those of Master of Arts (M. A.) and Doctor of Philosophy (Ph. D.). The degree of Master of Arts usually represents one year of advanced study and research along some particular line. Some graduate schools require the preparation of a thesis, but practice in this respect varies greatly. The degree is laid down by some graduate schools as the necessary prerequisite for enrollment for the Ph. D.

The degree of Doctor of Philosophy usually represents three years of distinctly research work after obtaining the degrees of Bachelor of Arts or Science. Most graduate schools require the candidate to pursue studies along one main line called the major study, and two other closely related lines, called the minor studies, such as history, political science, geography. A thesis is always required upon some theme comprised within the major study. This thesis must evidence not only conscientious, systematic research but also superior intellectual qualities, and must be a distinctly original and valuable contribution to the subject. It is increasingly rare for a teacher to be named titular professor who is not a Doctor of Philosophy.

American professional and technical schools are of so many different types, their courses of study are so varied and their requirements, both for admission and for degrees, are so diverse that any brief summary is impossible. In general it may be said that the best schools of law offer a largely prescribed course of three years leading to the degree of Bachelor of Laws. Sometimes a fourth year of supplementary graduate work is offered. The eight medical schools, recognised by the Carnegie Foundation as of the highest rank, offer a four year course leading to the degree of Doctor of Medicine. An extra year of service in a hospital is often required in fulfilment of the requirements for the degree. Both law and medical schools of higher grade require that the candidate for admission shall have obtained the degree of Bachelor of Arts or more often, Bachelor of Science, and that, during his undergraduate course, he shall have pursued successfully certain prescribed courses of study.

A majority of the larger institutions of higher education in the United States admit women to all their courses and laboratories on the same conditions as men. The group of older colleges founded before 1830, however, continue to admit men only. Some of the colleges which have developed into universities admit women to their graduate and professional schools, but have created an undergraduate college for women only in which the corps of teachers is drawn from the men's college. The first college exclusively for women, Randolph Macon College at Ashland, Virginia, was founded in 1830.

Since that date a considerable number of women's colleges have been established of which the best known, in the order of their founding, are Mt. Holyoke, Vassar, Wells, Smith, Wellesley, Radcliffe, Bryn Mawr and Barnard. All the state universities, and nearly, all the endowed universities and schools of the Central and Western states are co-educational.

American institutions of higher education are maintained and supported in various ways. A very large number depend upon private gifts and endowments and the fees paid by students. This is true of nearly all the older colleges and the universities, like Harvard, Yale, Columbia and Princeton, which are the outgrowth of colleges. These endowments, which have often been amassed during long periods, and which represent hundreds of individual gifts, sometimes reach very considerable sums, such as the endowment of Harvard University which now amounts to more than 28,000,000 doll. The universities and technical schools, founded and maintained by the different states, are usually supported mostly by direct taxation of the property of the state. These direct taxes sometimes take the form of a fixed mill tax, sometimes the form of special appropriations from year to year. The revenue of state institutions is often augmented by students fees and, in some cases, by endowments and land grants made by the United States government to the several states for the purpose of promoting higher education. A very few universities are supported almost entirely by ecclesiastical organizations.

ASSOCIATION OF AMERICAN UNIVERSITIES.

The Ass. of Am. Univ. is founded for the purpose of considering matters of common interest relating to graduate study.

Officers (1925-1926) :

President : The representative of the Washington University.

Vice-President : The representative of University of California.

Secretary : The representative of the University of Michigan (to serve for a period of five years from 1923). Dean A. H. Lloyd, University of Michigan, Ann Arbor, Michigan.

Additional Members of the Executive Committee : The representative of Ohio State University, the representative of University of Virginia.

Philosophy I : E. Jordan.

Second Year :

History II : J. Labrador.
Literature II : J. Sanchez.
Hebrew : C. Fernandez.
Philosophy II : E. Jordan.

Third Year :

Classics : J. Sanchez.
History III : J. Labrador.
Philosophy III : E. Jordan.
Literature III : J. Sanchez.

Doctorate :

Philology : J. Sanchez.
History of Philosophy : E. Jordan.
Sociology : J. Labrador.

Faculty of Medicine and Surgery.

First Year :

Anatomy : W. Castro, W. Del Val,
 W. Anguita, J. V. del Rosario,
 W. Molina.
Histology : W. Molina.
Embryology : W. Molina.
Neurology : W. Castro, Dean.
Bio-Chemistry : W. Potenciano.
Physiology : W. Paredes.

Second Year :

Bacteriology : W. Guerrero.
Parasitology : W. Guerrero.
Pathology : W. Hilario.
Pharmacology : W. Paredes.
Physical Diagnosis : W. Valdès.
Hygiene : W. Gabriel.
Surgical Anatomy : G. Vazquez.
Minor Surgery : G. Vazquez.

Third Year :

Clinical Pathology : W. Ortigas.
Clinical Medicine : W. G. Cabezas.
Surgical Pathology : W. Singian,
 W. Jacinto, Asst. Prof.
Surgery and its branches : W. Miciano, W. Singian, V. de Ocampo,
 W. Jacinto, Asst. Prof.
Pediatrics : W. Quintos.
Clinical Diagnosis : W. Valdès.
Therapeutics : W. Potenciano.
Obstetrics : R. López; W. Delgado
 Asst. Prof.

Eye, Ear, Nose, etc. : Basa.
Tropical Medicine : Ortigas.
Gynecology : E. López.
Gynecological Dispensary : E. López,
 Genato.
Gynecological Clinic : E. López
 Genato.
Dermatology and Syphilology : Hilario.
Clinical Pharmacology : G. Vazquez.

Fourth year :

Roentgenology and Radiumtherapy :
 R. Fernández.
Clinical Medicine : Burke.
Neurology and Psychiatry : Burke.
Pediatric Conferences : Quintos.
Clinical Pediatrics : Quintos.
Legal Medicine and Medical Economics and Ethics : Quintos.
History of Medicine : Valdès.
Epidemiology : P. Gabriel.
Surgery : Miciano, Singian, V. de Ocampo, Tuason; Jacinto, Asst. Prof.
Clinical Obstetrics : R. López, E. López.

Fifth Year :

Special course in Tuberculosis : Peñaflo.
Contagious Diseases : Gavino.
Psychiatry : Domingo.

Faculty of Pharmacy.

First Year :

General and Inorganic Chemistry :
E. Llanderal.
Pharmaceutical Accounting : **J. Abad.**
Animal Physiology : **J. Paredes.**
Parasitology : **R. Lanuza.**
Bacteriology : **R. Lanuza.**
Application of Physics to Pharmacy :
A. Reyes.
Botany : **F. González.**

Second Year :

Phytological and Zoological Pharmacy : **J. Abad.**
Pharmacy, Organic and Vegetal Chemistry : **M. Zamora.**
Hygiene and Sanitation : **P. Gabriel.**
Pharmaceutical Legislation and Professional Ethics : **R. Lanuza.**
Botany : **L. M. Guerrero, Dean.**

Third Year :

Chemistry, qualitative Analysis and Drug Analysis : **W. Hazañas, Asst Prof.**
Galenic Preparations : **M. Oirola.**
Filing of Prescriptions and Incompatibilities : **M. Oirola.**
Quantitative Analysis and Standardization of the active Principles of Plants and animal Drugs :
W. Hazañas, Asst. Prof.
Toxicology Pharmacodinamia and Toxicological Analysis : **A. Reyes.**

Doctorate in Pharmacy :

Advanced qualitative Analysis : **D. Juan.**
Advanced Botany : **L. M. Guerrero.**
Biological Chemistry : **C. Potenciano.**
History of Pharmacy and pharmaceutical Bibliography : **A. Reyes.**
Advanced Physics and Chemistry : **A. Reyes.**

Faculty of Civil Engineering.

First Year :

Trigonometry and Analytical Geometry : **M. Alcuaz, Asst. Prof.**
Mathematical Analysis : **M. González, Asst. Prof.**
Political Economy : **C. Prieto.**
Freehand Drawing : **J. de la Rosa.**
Geometrical Drawing : **J. de la Rosa.**
Descriptive Geometry : **V. L. Legarda.**

Second Year :

General Chemistry : **E. Llanderal.**
Chemical Analysis : **J. Garrido.**
Elementary Mineralogy and Geology : **R. Ruaño.**
Topographic Drawing : **J. de la Rosa.**
Calculus : **E. M. de Moreta.**
Topography : **J. González, Asst. Prof.**

Third Year :

Physics : **E. M. de Moreta.**
General Mechanics : **M. Alcuaz, Asst. Prof.**
Structural Drawing : **J. de la Rosa.**
Architectural Drawing : **J. de la Rosa.**

Materials of Construction : **C. Mandelbaun.**
Building Construction and Stereotomy : **V. L. Legarda.**
Foundations : **C. Mandelbaun.**

Fourth Year :

Mechanics as applied to Construction : **N. Cortés, Asst. Prof.**
Architectural Drawing : **J. de la Rosa.**
Exercises of Graphic Statics : **J. Garrido.**
Hydraulics, Water Supply : **S. Artiaga, Dean.**
Sanitation : **A. Artiaga.**
Mechanics as applied to Engines :
E. M. de Moreta.

Fifth Year :

Civil Architecture : **M. Mañosa, Asst. Prof.**
Railroads, Roadways, Streets and Accountings : **M. Mañosa, Asst. Prof.**
Irrigation and Navigation Canals : **N. Cortés, Asst. Prof.**
Ports and Lighthouses : **F. Ocampo, Asst. Prof.**
Bridges and Tunnels : **J. Garrido.**

PARIS

Université de Paris (1925).

Académie de Paris, rue des Ecoles. Téléph. de l'Acad. : Gobelins-12.80.

L'Université de Paris est, avec celle de Bologne, la plus ancienne du monde.

Dès le milieu du ^{xii}e siècle, en effet, les écoles parisiennes étaient nombreuses et la renommée que leur avaient acquise des maîtres, tels que Abélard et Guillaume de Champeaux, attirait à elles les étudiants de tous les pays. On y enseignait les sciences alors connues et, tout d'abord, les arts libéraux constituant le *trivium* et le *quadrivium*, puis des sciences plus spéciales, la Médecine, le Droit civil, le Droit canonique et la Théologie.

Ces écoles étaient placées sous l'autorité directe de l'évêque de Paris, qui délivrait la *licentia docendi* sans laquelle on ne pouvait enseigner et conservait, tant sur l'enseignement que sur la discipline, un droit permanent de surveillance.

En 1200, à l'occasion d'une rixe survenue entre étudiants et bourgeois, une charte de Philippe-Auguste enlève l'Université à la juridiction civile pour la soumettre aux seuls juges d'Eglise. Un peu plus tard, en 1215, une bulle papale, la constituant comme corporation ecclésiastique, lui reconnaît le droit de réunion et de coalition, celui aussi de posséder un sceau et la place sous l'autorité directe du Saint-Siège.

Nombre d'étudiants en janvier 1925 : Droit, 9162; Médecine, 4561; Sciences, 3170; Lettres, 3621; Pharmacie, 861. Total : 21.485.

PARIS

Ecole Normale supérieure (1926).

45, rue d'Ulm, Paris (5^e). Téléph. Gobelins-06.45.

Fondée en 1795.

Recrutement au concours, les premiers de la liste entrant à l'Ecole Normale les suivants étant *boursiers de licence*.

Les candidats se préparent à ce concours, pour la section des Lettres, dans les classes de première supérieure de certains lycées, en travaillant sur des programmes qui sont ceux des classes supérieures de lettres; pour la section des sciences, dans les classes de mathématiques spéciales, en travaillant sur des programmes identiques à ceux de l'Ecole Polytechnique, ou dans les Facultés des Sciences, en suivant les cours de Mathématiques générales et l'enseignement du P. C. N. L'Ecole admet en moyenne, chaque année, 30 élèves dans la section des Lettres et 20 dans celle des Sciences.

Le rôle actuel de l'Ecole Normale supérieure consiste à recruter, par le prestige dont elle jouit, la majeure partie des jeunes gens qui, même sans passer par elle, doivent entrer dans le professorat de l'enseignement secondaire; à favoriser le goût de la recherche scientifique personnelle, qui conduit à l'enseignement supérieur une partie de ceux qu'elle reçoit; à constituer un milieu d'élite où, sous un régime de liberté très large, vivent en commun des étudiants qui se destinent aux études et aux enseignements les plus divers. Elle n'a, à cet égard, d'équivalent dans aucun autre pays du monde.

Fondée en 1795 (an III), rétablie en 1808, puis en 1826.

Nombre d'étudiants (1924-1925) : 177.

Muséum national d'Histoire naturelle (1926).57, rue Cuvier, Paris (5^e). Téléph. : Gobelins-08.39.*Cours publics.*Directeur : **L. Mangin.** — Secrétaire : **W. Moine.**Surveillant général : **J. Peyrelongue.** — Bibliothécaire : **L. Bultingaire.**

A son origine, l'Etablissement qui devait devenir le Muséum national d'Histoire naturelle portait simplement le nom de *Jardin des plantes médicinales*, d'où le nom populaire de *Jardin des Plantes* qui lui est resté. Il fut fondé par Guy de Labrousse en 1627 et entra dans les attributions du premier médecin du Roi. Son premier intendant indépendant fut le physicien Dufet qui eut pour successeur Buffon, qui l'agrandit beaucoup et lui donna une universelle réputation. En 1793, la Convention lui donna son nom actuel et le chargea de l'enseignement de l'Histoire naturelle dans toute son étendue et principalement dans ses applications à l'Agriculture, au Commerce et aux Arts. Il est devenu le centre de cet enseignement en France. Cet enseignement comporte 19 chaires, qui disposent de vastes laboratoires où les travailleurs sont admis; il s'y ajoute une ménagerie étendue, un jardin botanique où les plantes sont classées par famille, des serres très riches en plantes exotiques, un laboratoire maritime situé primitivement dans la localité de Saint-Waast-la-Hougue, aujourd'hui installé à Saint-Servan, célèbre parmi les zoologistes et les botanistes. Mais le Muséum d'Histoire naturelle est un établissement unique par ses collections qui constituent l'état civil des trois règnes de la Nature.

MONTPELLIER (Hérault)

Lycée de Montpellier. Académie de Montpellier (1926)

Proviseur : L. Lavault.

Classe de Mathématiques spéciales. Professeurs de Mathématiques :

Cours préparatoire à l'Ecole Polytechnique et à l'Ecole Normale supérieure Sciences : A. Marchaud.

Cours préparatoire au cours précédent : F. Pons.

MULHOUSE (Haut-Rhin).

École supérieure de Chimie de la Ville de Mulhouse.
(1926)

(24, Boulevard du Maréchal-Pétain, Téléphone : 880).

Admission : 1° Les étudiants pourvus du diplôme de bachelier ès sciences ; 2° ou bien après examen.

Durée des études : 3 et 4 ans. Diplôme d'ingénieur-chimiste E. C. M. (3 ans). Diplôme pour recherches scientifiques (4 ans).

Nombre d'étudiants (1925-1926) : 90.

Directeur : E. Wild. — Directeur-adjoint M. Battegay.

Professeurs : *Chimie minérale (générale et appliquée) :* E. Wild. — *Chimie analytique :* R. Flatt. — *Chimie organique générale :* G. Mignonnac. — *Chimie organique spéciale (produits intermédiaires et colorants, Fibres textiles, Blanchiment, Teinture, Impression) :* M. LE CORRESPONDANT

(Quatre-vingt-tix-huitième année)

**Religion, Philosophie, Politique, Histoire, Sciences
Économie Sociale, Voyages, Littérature, Beaux-Arts.**

Fondé en mars 1829, *le Correspondant* est la plus ancienne Revue française.

D'une très grande objectivité, et dirigé avec une indépendance totale soit des coteries politiques, soit de la finance, il a conquis une autorité incontestée, spécialement en ce qui touche les questions étrangères, où il se fait remarquer, de l'aveu général, par la documentation la mieux informée, le sens aigu des nécessités et des possibilités internationales, un esprit politique supérieur aux polémiques habituelles des partis.

Très fidèle aux grandes traditions de ses fondateurs et de ses illustres maîtres, il est ouvert aux plus consciencieuses recherches qui préparent le progrès.

Ce n'est pas un simple magazine ; c'est une Revue d'Idées et d'action, et l'élite le suit avec un vif intérêt parce qu'il a le courage de préférer aux mots qui flattent les vérités qui sauvent.

La Revue paraît le 10 et le 25 de chaque mois.

ABONNEMENTS : France et Colonies : un an : 60 fr. ; 6 mois : 31 fr.

“SCIENTIA”

REVUE INTERNATIONALE DE SYNTHÈSE SCIENTIFIQUE

Paraissant mensuellement (en fasc. de 100 à 120 p. chacun)

Directeur : EUGENIO RIGNANO

EST L'UNIQUE REVUE à collaboration vraiment internationale, à diffusion absolument mondiale, de synthèse et d'unification de savoir, qui traite de toutes les sciences : histoire des sciences, mathématiques, astronomie, géologie, physique, chimie, biologie, psychologie et sociologie.

EST L'UNIQUE REVUE qui, par des enquêtes conduites auprès des plus éminents savants et écrivains de tous les pays (*Sur les principes philosophiques des diverses sciences; Sur les questions d'astronomie et de physique les plus fondamentales, et en particulier sur la relativité; Sur la contribution que les divers pays ont apportée au développement des branches du savoir; Sur les plus importantes questions de biologie, et en particulier sur le vitalisme; Sur la question sociale; Sur les grandes questions internationales soulevées par la guerre mondiale*), étudie tous les problèmes essentiels qui agitent les milieux intellectuels du monde entier, et constitue en même temps le premier essai d'organisation internationale du mouvement philosophique et scientifique.

EST L'UNIQUE REVUE, qui ait parmi ses collaborateurs les savants les plus illustres du monde entier. Une liste de ceux-ci, comprenant plus de 350 noms, est reproduite dans tous les fascicules.

Les articles sont publiés dans la langue de leurs auteurs, et à chaque fascicule est joint un supplément contenant la traduction française de tous les articles non français. (Un numéro spécimen gratuit sur demande, joindre quatre francs en timbres-poste de votre pays pour frais d'envoi).

ESPAÑA

En España la enseñanza secundaria se da en los establecimientos oficiales llamados *Institutos generales y técnicos*. Hay un bachillerato único, cuya duración es de 6 años de estudio. Se ingresa mediante un examen de admisión y después de cursadas y aprobadas en exámenes parciales las diversas asignaturas de Ciencias y Letras, distribuidas en los seis años, se obtiene el grado de *Bachiller*, mediante un examen final ante los profesores del Instituto, sin ninguna intervención de la Universidad.

Recientemente ha creado el Gobierno, bajo la dirección de la *Junta para ampliación de estudios*, un nuevo Instituto-Escuela, donde se está ensayando un nuevo plan, con objeto de implantar en todos la reforma, si los resultados son satisfactorios. En este centro las enseñanzas se desarrollan cíclicamente; no hay exámenes parciales; existe un período preparatorio de enseñanza primaria, y después de un ciclo de carácter general cuya duración normal es de cuatro años, se bifurca la enseñanza en dos direcciones principales, una de Ciencias y otra de Letras, con otras intermedias según los deseos de cada familia. En la sección de Ciencias se llega hasta las primeras nociones de Cálculo infinitesimal, Geometría analítica y descriptiva.

La Facultad de Ciencias está dividida en cuatro secciones: Exactas, Físicas, Químicas y Naturales. Por el carácter demasiado elemental del actual bachillerato, el primer curso de la Facultad es preparatorio para los estudios propiamente universitarios. Al cabo de cuatro años de estudios en cualquiera de las secciones, y previo un examen de reválida, se obtiene el título de *Licenciado*. Para aspirar al título de *Doctor*, es preciso cursar ciertas enseñanzas especiales, y presentar una tesis á la aprobación de la Facultad.

El título de licenciado es suficiente para aspirar al profesorado secundario; el de doctor se exige para el profesorado universitario; pero unos y otros aspirantes han de someterse a una serie de ejercicios teórico-prácticos, que constituyen las llamadas *oposiciones* a la cátedra vacante. Estos ejercicios de oposición se verifican ante un tribunal nombrado por el Ministerio.

UNIVERSIDADES.

Madrid (Central), Barcelona, Granada, Murcia, Oviedo, Salamanca, Santiago, Sevilla (otra Facultad de Medicina en Cadiz), Valencia, Valladolid, Zaragoza y Sección universitaria de La Laguna (Canarias).

Todas las Universidades, a excepción de la de Murcia y la sección universitaria de La Laguna, son de muy antigua creación. Solamente se distinguen las Universidades en el número de facultades que abarcan, y en que la de Madrid es la única que otorga el título de doctor.

Además de las enseñanzas, las Universidades cuentan con bibliotecas. También comprenden otros institutos científicos, laboratorios, etc.

España está dividida en once distritos universitarios, regidos cada uno por un Consejo; de estos dependen los demás establecimientos de enseñanza oficial que existen en las provincias.

Madrid comprende las provincias de Madrid, Ciudad Real, Cuenca, Guadalajara, Segovia y Toledo.

Barcelona, las de Barcelona, Gerona, Lérida, Tarragona e Islas Baleares. Granada, las de Granada, Almería, Jaén y Málaga.

Oviedo, las de Oviedo y León.

Salamanca, las de Salamanca, Avila, Cáceres y Zamora.

Santiago, las de La Coruña, Lugo, Orense y Pontevedra.

Sevilla, las de Sevilla, Badajoz, Cádiz, Islas Canarias, Córdoba y Huelva.

Valencia, las de Valencia, Alicante y Castellón.

Valladolid, las de Valladolid, Alava, Burgos, Guipúzcoa, Palencia, Santander y Vizcaya.

Zaragoza, las de Zaragoza, Huesca, Logroño, Navarra, Soria y Teruel.

Murcia, las de Murcia y Albacete.

DISPOSICIONES GENERALES

A TODAS LAS CARRERAS UNIVERSITARIAS

CLASES DE ENSEÑANZA.

Hay dos clases de enseñanza : La oficial supone una participación directa del alumno durante todo el curso, desde 1º de octubre hasta el 20 de mayo, en todos los trabajos de cátedra, laboratorios, clínicas y seminarios, aunque la asistencia es voluntaria, según Real decreto de 7 de enero de 1916.

La enseñanza no oficial, llamada también libre o privada, sólo se manifiesta en la presentación del alumno a los exámenes por asignaturas en los meses de Junio y Septiembre, ante tribunales que se anuncian en el mes de Mayo.

Al expedirse los respectivos títulos, no se hace mención alguna especial del carácter oficial o libre de los estudios á que se refieren.

Matriculas.

Para matricularse en el curso preparatorio de Facultad bastará acreditar la aprobación de los ejercicios del grado de Bachiller.

Para sacar las papeletas de examen, es absolutamente indispensable hallarse en posesión de este título.

Para matricularse con validez académica en cualquiera de las facultades universitarias son necesarios los requisitos siguientes : haber obtenido el grado de Bachiller, tener aprobadas todas las asignaturas del curso preparatorio en las facultades donde esta preparación se exige, cuales son la de Derecho, la de Medicina y la de Farmacia.

Estudios y Títulos extranjeros.

España tiene tratados especiales de reciprocidad de títulos académicos con Bolivia, Colombia, Honduras, Nicaragua, Perú y San Salvador.

FACULTAD DE FILOSOFIA Y LETRAS.

Comprende tres secciones : Filosofía, Letras e Historia. Tienen dos cursos preparatorios de estudios comunes a las tres secciones, dos cursos especiales en la licenciatura y un curso especial en el doctorado.

Las tres secciones completas de la licenciatura se cursan únicamente en las Universidades de Madrid y Barcelona.

Únicamente se cursa el primer año preparatorio en las Universidades de Murcia, Oviedo, Santiago y en la sección universitaria de La Laguna.

Los dos años preparatorios se cursan en las Universidades de Granada, Salamanca, Sevilla, Valencia, Valladolid y Zaragoza.

Sólo se cursa la Sección de Letras en Granada y Salamanca.

Sólo se cursa la Sección de Historia en Sevilla, Valencia, Valladolid y Zaragoza.

Los doctorados no se cursan más que en la Universidad de Madrid.

Ninguna asignatura tiene clase práctica.

El coste de matrículas y títulos es éste : La licenciatura de las secciones de Filosofía o de Historia, por enseñanza oficial, 1028.40 pesetas; por la no oficial, 1058.20 pesetas. La sección de Letras, oficial, 1126.80 pesetas; no oficial 1163.60 pesetas. El doctorado de todas las secciones es igual, pues consta de cuatro asignaturas obligatorias : por enseñanza oficial, 1298,20 pesetas; no oficial, 1307,40 pesetas.

FACULTAD DE CIENCIAS.

Comprende cuatro secciones : Ciencias exactas, Físicas, Químicas y Naturales. Comprenden todas las secciones cuatro años de estudios y uno de doctorado. En los dos primeros cursos hay algunas asignaturas comunes a todas las secciones.

Las cuatro secciones completas de la licenciatura se cursan únicamente en las universidades de Madrid y Barcelona.

El curso preparatorio de Medicina y Farmacia, en las de Santiago, Murcia, Cádiz y Valladolid.

Sólo se cursan la sección de Ciencias exactas y Físicas en Zaragoza.

Sólo se cursa la sección de Ciencias Químicas en Granada, Oviedo, Salamanca, Sevilla, Valencia y Zaragoza.

Los doctorados sólo se cursan en la Universidad de Madrid.

Sección de Ciencias Exactas.

El coste de matrículas y títulos es éste : Licenciatura, por enseñanza oficial, incluyendo las prácticas, 1068,40 pesetas; no oficial, 1058,30 pesetas. Doctorado, por enseñanza oficial, 1255,90 pesetas; no oficial, 1262,80 pesetas.

Sección de Ciencias Físicas.

El coste de matrículas y títulos es éste : Licenciatura, por enseñanza oficial incluyendo las prácticas, 1088, 40 pesetas; no oficial, 1058,30 pesetas. Doctorado, por enseñanza oficial incluyendo una asignatura práctica, 1265,90 pesetas; no oficial, 1262, 80 pesetas.

Sección de Ciencias Químicas.

El coste de matrículas y títulos es éste : Licenciatura, por enseñanza oficial, incluyendo las prácticas, 1151,40 pesetas; no oficial, 1093,40 pesetas. Doctorado, por enseñanza oficial, incluyendo las prácticas 1285,90 pesetas; no oficial, 1262,80 pesetas.

Sección de Ciencias Naturales.

El coste, de matrículas y títulos es éste : Licenciatura, por enseñanza oficial, incluyendo, las prácticas, 1276,80 pesetas; no oficial 1163,60 pesetas. Doctorado, por enseñanza oficial, incluyendo las prácticas, 1285,90 pesetas; no oficial, 1262,80 pesetas.

FACULTAD DE DERECHO.

La carrera de Derecho requiere la aprobación del primer curso preparatorio de la Facultad de Filosofía y Letras. Comprende además el estudio de cinco cursos especiales de licenciatura y uno del doctorado.

Se estudia en todas las Universidades. En la sección universitaria de La Laguna se cursan sólo los dos primeros grupos de la licenciatura.

El doctorado sólo se cursa en la Universidad de Madrid.

La Facultad de Derecho comprende también la carrera del Notariado, cuyos alumnos, después de obtenido, el título de bachiller, cursarán sus estudios en las mismas clases que los de Derecho.

El coste de matrículas y títulos es éste : Licenciatura, por enseñanza oficial, incluyendo las prácticas, 1515,20 pesetas; no oficial, 1518,90 pesetas. Doctorado, por enseñanza oficial incluyendo una práctica, 1308,70 pesetas; no oficial, 1307,90 pesetas.

FACULTAD DE MEDICINA.

La carrera de Medicina requiere la aprobación de las siguientes asignaturas de los preparatorios de la Facultad de Ciencias : Física general, Química general, Mineralogía y Botánica y Zoología general.

Comprende además el estudio de seis cursos especiales de la licenciatura y uno del doctorado.

Se estudia en las Universidades de Madrid, Barcelona, Granada, Salamanca, Santiago, Sevilla, Cádiz (únicamente hay Facultad de Medicinal, Valencia, Valladolid y Zaragoza. El Doctorado sólo se cursa en la Universidad de Madrid.

El coste de matrículas y títulos es éste : Licenciatura por enseñanza oficial incluyendo las prácticas, 2050,40 pesetas ; no oficial, 1834,80 pesetas. Doctorado, por enseñanza oficial, incluyendo las prácticas, 1328,70 pesetas; no oficial, 1307,90 pesetas.

Practicantes : Los estudios oficiales se darán en dos cursos académicos.

Matronas : Los estudios se hacen en las facultades de Medicina.

ESCUELA DE ODONTOLOGIA.

Por Real orden de 13 de agosto de 1914, se estableció la Escuela de Odontología, adscrita a la Facultad de Medicina de Madrid.

Comprende dos cursos además de aprobar los dos primeros de la Facultad de Medicina.

FACULTAD DE FARMACIA.

La carrera de Farmacia requiere la aprobación del primer curso preparatorio de la Facultad de Ciencias : Física general, Química general, Mineralogía y Botánica, y Zoología general.

Comprende además el estudio de cuatro cursos especiales de la licenciatura y uno del doctorado.

Se estudia en las universidades de Madrid, Barcelona, Granada y Santiago.

El doctorado sólo se cursa en la Universidad de Madrid.

El coste de matrículas y títulos es éste : Licenciatura, por enseñanza oficial incluyendo las prácticas, 1458,40 pesetas; no oficial, 1358,30 pesetas. Doctorado oficial, incluyendo las prácticas, 1328,70 pesetas; no oficial 1307,90 pesetas.

Enseñanzas :

Primer año.

Cálculo infinitesimal : **P. Fernández Quintana.**

Geometría descriptiva : **J. Granda Calleja.**

Física : **P. Fernández Quintana.**

Química, materiales pétreos, aglomerantes y maderas : **A. L. Fremco.**

Dibujo y Trabajos gráficos y de Laboratorio : **J. Cebada Ruiz.**

Inglés : **N. Puig de la Bellacasa.**

Segundo año.

Mecánica racional : **F. Casares Becansa.**

Geología : **N. Puig de la Bellacasa.**

Topografía y Geodesia : **E. Picó y Naya.**

Electrotecnia (primer curso) : **Luis Sanchez Cuervo.**

Dibujo y Trabajos gráficos y de Laboratorio : **E. Picó y Naya.**

Tercer año.

Materiales metálicos : **Domingo Mendizábal Hernández.**

Hidráulica y Termodinámica : **P. M. Gonzalez Quijano.**

Resistencia y estabilidad : **B. Granda y Calleja.**

Electrotecnia (primer curso) : **S. Zufiaurre y Goicoechea.**

Topografía y Geodesia : **E. Picó y Naya.**

Derecho administrativo y legislación de O. P. : **D. Mendizábal.**

Mecanismos y Máquinas : **J. Cebada y Ruiz.**

Trabajos gráficos y de Laboratorio :
Sres. profesores del curso.

Cuarto año.

Ríos, canales y Pantanos : **D. José, L. Gómez Navarro.**

Cimientos, Obras de Fábrica y Hormigón armado : **J. E. Ribera Dutasta.**

Caminos (primer curso) : **M. Aguilar López.**

Hormigón Armado : **A. Póña.**

Arquitectura y Legislación obrera :
V. Machimbarrena y Gogorza.

Quinto año.

Estructuras y Puentes metálicos : **S. M. de la Puente y Quijano.**

Ingeniería sanitaria, ríos, canales y pantanos : **A. Sonier y Puerta.**

Caminos (2º Curso) : **A. Prieto Vives.**

Puertos fijos y hormigón armado :
R. H. Mateos.

Proyectos de conjunto (primer curso) :
D. Enrique Colás Avias.

Economía política, Legislación :
C. de Orduña.

Sexto año.

(De 1º de Julio a 31 de Diciembre)

Economía política (conferencias) :
V. Machimbarrena y Gogorza.

Electricidad : **S. Cuervoy y Zufiaurre.**

Derecho administrativo (conferencias) : **C. de Orduña.**

Proyectos de fin de Carrera : **E. Colás y Arias.**

MADRID.

Escuela especial de Ingenieros de Minas (1926).

Director : E. Gullón y Dabán. — Secretario : P. de Aldecoa y Giménez.

Objeto de la Escuela. — La escuela especial de Ingenieros de Minas tiene por objeto la enseñanza completa de los conocimientos necesarios para ejercer en España esa profesión y para pertenecer al Cuerpo Nacional de Minas.

Profesores :

Primer año.

Mecánica Racional : E. Lacasa y Moreno.

Geometría Descriptiva : A. Montenegro Irisarri.

Física Termodinámica : A. Marín Lanzas.

Topografía : M. Langreo Contreras.

Dibujo : A. Montenegro Irisarri.

Segundo año.

Química General : L. Gamir y Espina.

Mecánica aplicada : E. González Llana.

Hidráulica : E. Gonzalez Llana.

Trigonometría y Geodesia : M. Langreo Contreras.

Derecho : J. Prats y García Olalla.

Dibujo : A. Montenegro Irisarri.

Tercer año.

Mecanismos : M. Querjeta Goena.

Mineralogía : E. de Pineda, Sanchez Ocaña.

Química Analítica : F. E. Bayo y Timerhans.

Paleontología : L. Jordana y Soler.

Química Industrial : L. Gamirly Espina.

Electrotecnia 1º curso : M. Querjeta Goena.

Dibujo : A. Montenegro Irisarri.

Cuarto año.

Construcción : J. Alfaro Cordon.

Geología : P. Fábrega y Coello.

Metalurgia general : E. Fernández Miranda.

Electrotecnia (2º curso) : M. Querjeta Goena.

Quinto año.

Laboreo de Minas : F. Gómez Rojas.

Siderurgia : E. Fernández Miranda.

Metalurgia Especial : A. Marín y Hervás.

Criaderos minerales : P. Fábrega y Coello.

Transportes : J. A. Cordon.

Economía industrial mineral : J. Prats y García Olalla.

MADRID.

Escuela especial de Ingenieros de Montes (1926)

Rey Francisco, 4. Teléf. J.-1409.

Director : J. M. García Vana.

Secretario : L. Sanguino.

Objeto de la Escuela. — La Escuela de Ingenieros de Montes tiene por objeto darlas enseñanzas necesaria para ser Ingeniero de Montes.

Enseñanza de la Escuela. — La enseñanza de la Escuela se distribuirá en cinco años, y comprenderá las materias siguientes :

Cálculo infinitesimal : J. Peñoñori.

Mecánica general : J. Peñoñori.

Geometría descriptiva y sus aplicaciones, Estereotomía : F. Mexia.

Física y Electrotecnia : F. Peña, Pr. auxiliar.

Química general-mineral y análisis mineral : J. Iturralde.

Motores y máquinas : J. M. Gimenez.

Hydraulica general y torrencial : J. M. Gimenez.

Botánica y microscopia : M. A. Esteve.

Química agrícola y Forestal Analisis : J. Iturralde.

Química general : J. Iturralde.

Geología : J. García Blanco.

Zoología forestal : M. Perez.

Enfermedades de la plantas : M. A. Esteve.
Entomología forestal : M. Perez.
Plagas de insectos en los montes : M. Perez.
Resistencias de materiales : J. M. Gimenez.
Topografía y Geodesia : P. Garcia Escudero.
Metereologia, Climatología y Fisiología forestal : J. Garcia Blanco.
Construcción general y Construcciones especiales : F. Baró.
Transportes forestales : F. Baró.
Selvicultura y Repoblaciones. Pasicultura : E. Gonzalez.

Derecho administrativo : E. Romero.
Torrentes y Ahudes : E. Gonzalez.
Legislación forestal : E. Romero.
Ordenación y valoración de montes : J. Ugarte.
Dasometria : J. Ugarte.
Dibujo de maquinas : J. M. Gimenez.
Dibujo zoografico : M. Perez.
Dibujo fotografico : M. A. Esteve.
Alemán : E. Herbella.
Tecnología forestal. Industrias y Aprovechamientos forestales : L. Velaz de Medrano.
 Profesores Auxiliares :
 F. Peña, L. Sanguino.

Escuela Superior de Bellas Artes

Escuela especial de Pintura, Escultura y Grabado (1926).

Alcalá, 13. Teléf. M.-1557.

Número de los alumnos (1924-1925) : 150.

Director : M. R. Domenech. — Secretario : M. Menéndez

Teoría de las Bellas Artes : R. Domenech.
Historia de las Bellas Artes : R. Domenech.
Perspectiva : M. Marín.
Anatomía Artística : M. Menéndez.
Dibujo de estatuas : J. Garnel.
Dibujo del natural : J. Moreno Carbonero.
Paisaje, Colorido y Composición : M. Benedito.
Estudios preparatorios de colorido : C. Pla.

Pintura decorativa : E. Simonet.
Dibujo de ropajes : J. Romero de Torres.
Grabado calcográfico : C. Verger.

Escultura.

Enseñanza gral de modelado : M. Angel Trilles.
Modelado del natural y composición : M. Castaños, interino.
Grabado en hueco : M. Angel Trilles, interino.

Instituto Agrícola de Alfonso XII (1926)

Moncloa. Telfº 729 J.

Fundado en 1855.

Número de alumnos : 1926-27 : 310

Objeto del Instituto. — 1º Enseñanza oficial agrícola Superiore y Secundaria. Titulos de Ingeniero Agrónomo y Perito Agrícola.

2º Explotacion de la finca « La Moncloa » como Granja Central.

3º Estaciones experimentales anejas a saber : Agronómica, de Patología, de Ensayo de Máquinas, de Ensayo de Semillas, de Motocultura.

Director Jefe : I. V. Clario-Soulan.

Sección de Enseñanza : Subdirector : A. Ullastres. — Secretario : A. Ballester. — Ayudantes : A. Salvador, R. Lopez.

Escuela Especial de Ingenieros agronomos.

Profesores : *Topografía y Geodesia, Geometría descriptiva y sus aplicaciones :* Vacante. — *Química agrícola y análisis agrícola :* **G. Quintanilla.** — *Geografía física y Climatología agrícola, Mineralogía y Geología agrícola :* **E. Alcaraz.** — *Meccánica (racional y aplicada a las maquinas y materiales) :* **M. Fernandez Cortes.** — *Técnica agrícola industrial (2º curso) :* **C. Tames.** — *Arboricultura y Elayotecnia. Selvicultura, Técnica agrícola industrial (1er curso) :* **F. P. de Quinto.** — *Construcción general agrícola; Proyectos de explotación :* **M. Naredo.** — *Hidráulica general y agrícola, Higiene rural y saneamientos :* **C. Benaiges.** — *Análisis infinitesimal con sus aplicaciones geométricas, Ampliación de Física :* **N. Ullastres.** — *Botánica descriptiva y Geografía botánica, Dibujo aplicado a las Ciencias Naturales :* **A. García Romero.** — *Economía política y social, Elementos de Hacienda pública, Economía agrícola :* **A. Ballester.** — *Microbiología agrícola, Viticultura, Enología y demas industrias derivadas :* **J. Marcilla.** — *Química orgánica, Química analítica :* **J. Díaz Muñoz.** — *Zootecnia (general y especial), Nociones de Patología animal :* **Z. Salazar.** — *Herbicultura, Praticultura, Horticultura y Jardinería, Cultivos tropicales :* **J. Miranda.** — *Fisiología, Técnica micrográfica, Genética :* **G. Alas.** — *Electrotecnia general y industrial agrícola :* **L. Manso.** — *Motores, maquinas y transportes agrícolas :* **E. Gimenez Giron.** — *Valoración y Catastro, Estadística y Legislación agrícola :* Vacante. — *Entomología agrícola, Patología vegetal y su terapeutica :* **M. Benlloch.**

Profesores auxiliares : **P. Herce, J. Escoriaza, A. Esteban de Faura.**

Escuela profesional de peritos Agrícolas.

Profesores : *Administración y Contabilidad agrícola, Nociones de Valoración agrícola y Catastro :* **P. Gordon.** — *Elementos de topografía, Dibujo topográfico, Rotulación de planos :* **A. Ullastres.** — *Elementos de Agronomía y Meteorología agrícola, Cultivos generales :* **B. Rioja.** — *Ejercicios de Física y Manipulaciones químicas, Industria rurales :* **E. Vellando.** — *Conocimiento, montaje y manejo de maquinas, Dibujo de máquinas :* **F. Gaspar.** — *Ampliación de Historia Natural, Ganadería :* **J. Soroa.**

Profesores auxiliares : **S. Maupoey, A. Salvador, S. Oñate, E. Zubía, V. Clemente Fernandez.**

Seccion de Staciones especiales.

Subdirector : **G. Quintanilla.**

Estacion Agronómica. — **Director :** **G. Quintanilla.** — **Ingeniero agregado :** **J. Díaz Muñoz, S. Cibrian.** — **Ayudantes :** **V. Feijoo, G. Collado.**
Estación de Ensayo de Maquinas. — **Director :** **M. Fernandez Cortes.** — **Ingeniero agregado :** **F. Pando-Arguelles, A. Velazquez.** — **Ayudante :** **G. Criado.**
Estacion de Patología vegetal. — **Director :** **M. Benlloch.** — **Ingeniero agregado :** **P. Herce, J. Cañizo.**
Estación de Ensayo de Semillas. — **Director :** **A. García Romero.** — **Ingeniero agregado :** **A. Esteban de Faura.** — **Ayudante :** **J. Gonzalez.**
Estación de Motocultura. — **Director :** **E. Gimenez Giron.** — **Ingeniero agregado :** **S. Sanchiz.**
Sección de explotación. — **Subdirector :** **A. Fernandez Cuervo.** — **Ingeniero Agregado :** **B. Gaspar Rodrigo.** — **Ayudantes :** **M. Ampuero, M. Cascajosa, R. Fuster.**

Fundado en 1909.

Número de alumnos en el curso 1924-1925: 190.

Rector : P. J. Panizo, S. J.

Estudios superiores de Ingeniero Mecánico-electricista.

1.^o año :

Cálculo infinitesimal : J. Plans.
Geometría analítica : C. Mataix.
Química general y Laboratorio :
 J. Orlands, S. J.
Dibujo y Geometría descriptiva : F.
 Bernáldez.
Inglés : F. G. Polavieja, S. J.
 Ajuste y prácticas de taller.

2.^o año :

*Mecánica racional y resistencia de
 materiales* : V. Burgaleta.
Mecanismos y dibujo : J. Ortega Parra.
Química aplicada y laboratorio :
 J. Orland, S. J.
Física matemática : J. Plans.
Inglés : F. G. Polavieja, S. J.
 Máquinas-herramientas, forja y
 estampado.

3.^o año :

*Motores térmicos e hidráulicos y
 prácticas* : P. M. Artiñano.
Electrotecnia y práctica : A. Pérez
 del Pulgar, S. J.
Organos de máquinas y dibujo :
 F. Bernáldez.
 Máquinas-herramientas, fabricación,
 verificación, fundición.

4.^o año :

Electrotecnia y prácticas : A. Pérez
 del Pulgar, S. J.
*Legislación industrial y administra-
 ción y contabilidad* : (vacante).
*Proyectos y presupuestos Oficina téc-
 nica* : F. M. Fernández de Castro.
*Laboratorio eléctrico bobinado y
 montaje* : (vacante).

Escuela de Ingenieros industriales (1926).

Director : P. Castells Vidal. — Secretario : A. Ferrán y Degrié.

Contador : J. Mañas Bonví. — Bibliotecario : L. Clariana.

1) = Professor auxiliar.

Primer curso.

- Análisis matemático* : P. Castells Vidal, A. García Font (1), P. Pujol Matabosch (1).
Geometría descriptiva : F. Gómez Carbonell, P. Nicolau Mulet (1), R. Oliveras Ferrer (1).
Química inorgánica y orgánica : J. Mañas Bonvíu, M. Useros García (1), E. Miquela y Feli (1).
Dibujo artístico industrial y topográfico : C. Cornet Palau, R. Moncunill Baucells (1), L. Masnou Pujol (1), P. Brossa (1).

Segundo curso.

- Cálculo integral y Mecánica racional* : F. Tallada Comellas, L. Clariana Roca (1), J. Xancó Roig.
Estereotomía : J. M. Lasarte Pessino (1), A. Gaya Busquets (1).
Física industrial (1º curso) : J. Mañas Bonví, M. Useros García (1), E. Miquela y Feliu (1).
Dibujo de taller : C. Cornet Palau, R. Moncunill Baucells (1), L. Masnou Pujol (1), P. Brossa (1).

Tercer curso.

- Teoría general de las máquinas* : J. Galí Fabra, I. Lana Sarrate (1), J. M. Sandoval Campderá (1).
Física industrial (2º curso) : A. Robert Rodríguez, R. Casanovas Degollada (1), J. M. Guindulain (1).
Topografía y nociones de geodesia : R. Vilamitjana Masdevall, E. Gutierrez Díaz, B. M. Sandoval Campderá (1).
Análisis químico : A. Ferrán Degrié, E. Gil Camporro (1), J. M. Puig Martí.
Mecánica aplicada a la construcción : R. Vilamitjana Masdevall, E. Gutierrez Díaz, B. M. Sandoval Campderá (1).
Dibujo de proyectos : C. Cornet y Palau, P. Moncunill Baucells (1), L. Masnou Pujol (1).

Cuarto curso.

- Química industrial inorgánica* : A.

Ferrán y Degrié, E. Gil Camporro (1), J. M. Puig Martí.

- Física industrial* (3º curso), *Electricidad* : A. Robert y Rodríguez, R. Casanovas Degollada (1), J. M. Guindulain (1).
Metalurgia general y Siderurgia : B. Lassaletta y Perrin, J. M. Grau (1), M. Cardelus Carrera (1).
Teoría especial de las máquinas, Hidráulica (1º curso) : J. Galí y Fabra (1), I. Lana Sarrate, J. M. Sandoval Campderá (1).
Dibujo de proyectos : C. Cornet y Palau, R. Moncunill Baucells (1), L. Masnou Pujol (1).

Quinto curso.

- Teoría especial de las máquinas* (2º curso) : R. Marqués Fabra, J. Gelpi Blanco (1), E. Muñoz Gómis (1).
Química industrial orgánica : R. Oliveras Massó, L. Daunis Grau (1), J. Dalmau Domingo (1).
Física industrial (4º curso), *Electrotecnia* : B. Lassaletta y Perrin, J. M. Grau, M. Cardelus Carrera (1).
Construcción y Arquitectura industrial : J. M. Lasarte y Pessino (1), A. Gaya-Busquets (1).
Dibujo de proyectos : C. Cornet y Palau, R. Moncunill Baucells (1), L. Masnou Pujol (1).

Sexto curso.

- Tintorería y Artes cerámicas* : R. Oliveras Massó, L. Daunis Grau (1), J. Dalmau Domingo (1).
Construcción de máquinas : R. Marqués Fabra, J. Gelpi Blanco (1), E. Muñoz Gómis (1).
Tecnología mecánica : J. Tous y Biaggi, J. Ortès Parera, A. de Quintana.
Ferrocarriles : J. Tous y Biaggi, J. Ortès Parera A. de Quintana.
Economía política. Legislación industrial y Estadística : F. Gómez Carbonell, P. Nicolau Mulet (1), R. Oliveras Ferrer (1).
Dibujo de proyectos : C. Cornet y Palau, R. Moncunill Baucells (1), L. Masnou Pujol (1).

Instituto Químico de Sarria (1926).

Campmany 12, Barcelona Tel. 272 H.

Fundado en 1916.

Numero de alumnos en el curso 1925-1926 : 55.

Director : P. E. Vitoria, S. J.

Estudios superiores de Química teórico-práctica.

1º ano. *Química minera* : S. Gil S. J. — 2º ano. *Análisis mineral* : E. Saz, S. J. — 3º ano. *Química del carbono* : E. Vitoria S. J.

Auxiliares : F. Galarza, S. J ; D. Riera S. J.

BILBAO.

**Escuela de Ingenieros industriales
(1956)**

Plaza de la República nº 3.

Fundada 1899. — Número de alumnos (1924-1925) : 200.

Director : C. de Madariaga. — Secretario : L. Checa. — Bibliotecario J. Ballvé.

(1) Profesorado auxiliar.

Primer curso.

Análisis matemático : C. de Madariaga, R. Rica (1).
Geometría descriptiva : S. Artiach (1).
Química inorgánica y orgánica : J. Prat, M. Castellanos (1).
Dibujo artístico industrial y topográfico : J. Suarez, S. Artiach (1).

Segundo curso.

Cálculo integral y Mecánica racional : E. Belda, R. Rica (1).
Estereotomía : S. Artiach.
Física industrial (1º curso) : F. Ara, J. Saenz (1).
Dibujo de taller : J. Suarez, S. Artiach (1).

Tercer curso.

Teoría general de las máquinas : P. Mendizabal (1).
Física industrial (2º curso) : L. Mellado, P. Mendizabal (1).
Topografía y Nociones de Geodesia : F. Ara, J. Saenz (1).
Análisis químico : L. Mellado, M. Castellanos (1).
Mecánica aplicada a la construcción : J. Torrónegui, J. Saenz (1).

Cuarto curso.

Química industrial inorgánica : S. Recalde, J. Nebreda (1).
Física industrial (3º curso) : L. Checa, E. Abásolo (1).
Metalurgia general y Siderurgia : P. Berroya, S. Belausteguigoitia (1).
Teoría especial de las máquinas (1º curso) : P. Mendizabal (1).

Quinto curso.

Teoría especial de las máquinas (2º curso) : M. Martinez, M. Mateo (1).
Química industrial orgánica : S. Recalde, J. Nebreda (1).
Física industrial (4º curso) : L. Checa, E. Atásolo (1).
Construcción y Arquitectura industrial : J. Torrónegui, J. Saenz (1).

Sexto curso.

Tintererío y Artes cerámicas : J. Prat, S. Belausteguigoitia (1).
Tecnología mecánica : J. Ballvé, D. Insausti (1).
Ferrocarriles : P. Berroya, D. Insausti (1).
Construcción de máquinas : M. Martinez, M. Mateo (1).
Economía política, legislación industrial y Estadística : J. Ballvé, D. Insausti (1).

ATHÈNES.
Ethnikon Metz. Polytechnion.
(1926)

(École technique supérieure).

Nombre d'étudiants (1925-1926) : 460

Directeur : A. Ghinis. — Secrétaire : P. Théotocatos.

Fondée en 1837 comme Ecole d'Architectes et de Géomètres-Arpenteurs et réorganisée en 1887 et 1914 comme Ecole Technique Supérieure, d'abord avec deux, puis avec cinq Facultés : Ecole d'Ingénieurs civils, Ecole d'Ingénieurs Mécaniciens-Electriciens, Ecole d'Architecture, Ecole d'Ingénieurs-Chimistes et Ecole d'Ingénieurs-Topographes. La durée des études est de 5 années dans les trois premières Facultés, 4 dans la suivante et 3 dans la dernière. A la fin des études, il est délivré un diplôme.

Laboratoires : Chimie générale expérimentale, Chimie analytique, Chimie organique, Chimie industrielle, Physique, Collection minéralogique et pétrographique, Institut électrotechnique, Laboratoire de Mécanique appliquée, Constructions mécaniques, Laboratoires de Résistance et d'Essai des matériaux, Collection géodésique.

Bibliothèque : Plus de 10.000 volumes.

Professeurs ordinaires :

Mathématiques supérieures et mécanique rationnelle : N. Gennimatas.

Analyse mathématique : G. Rémoûndos.

Géométrie descriptive : J. Hadzopoulos.

Physique : C. Maltézos.

Chimie générale : T. Varounis.

Chimie organique : vacant.

Chimie industrielle minérale : A. Vournázos.

Chimie industrielle organique : C. Vélis.

Géodésie, Topographie, Cadastre : D. Lampadários.

Construction des Routes et Terrassements : S. Nomikós.

Chemins de fer : D. Protopapadakis.

Ponts en Bois et en Maçonnerie, Murs de soutènement, Fondations : C. Pantazis.

Statique appliquée, Constructions métalliques : N. Kitsikis.

Travaux maritimes : A. Ghinis.

Mécanique technique : Ph. Théodoridis.

Technologie théorique des machines : A. Michalopoulos.

Technologie générale des machines : G. Maltézos.

Construction des Machines thermiques et hydrauliques : A. Melénkovits.

Théorie et Construction des éléments des machines et des chaudières : J. Théophanópoulos.

Electrotechnique générale et appliquée : G. Sarrópoulos.

Architecture : A. Orlândos.

Procédés généraux de construction : E. Kriezis.

Hydraulique appliquée. Travaux hydrauliques : A. Sínos.

Economie politique : S. Koronis.

Théorie de l'architecture : B. Courremenos.

Professeurs extraordinaires :

Eléments de Mathématiques supérieures et de Mécanique rationnelle : A. Oeconómu.

Exploitation des Mines et Métallurgie : E. Gounaris.

Electrotechnique appliquée (Installations électriques et Construction des lignes) : C. Stámou.

Introduction à l'Electrotechnique. Technologie des courants faibles : C. Gounarákis.

Minéralogie. Géologie et Pétrographie : J. Doanidis.

Constructions en Béton armé : P. Paraskévópoulos.

Peinture : N. Asprogérakas.

Chimie analytique : S. Horsch.

Chimie Physique. Electrochimie appliquée : P. Zacharias.

Chimie des substances alimentaires : T. Stathópoulos.

Botanique : J. Politis.

Technologie spéciale des machines : A. Koutsokostas.

Architecture décorative : D. Pikionis.

Plastique : A. Sókhos.

ATHÈNES.

NOTES

ITALIA

Università' e Istituti Superiori

Ordinamento della Università' e degli istituti superiori. — L'istruzione superiore è impartita nelle Università e negli Istituti Superiori. Lo Stato provvede interamente a sue spese a 10 RR. Università (Bologna, Cagliari, Genova, Napoli, Padova, Palermo, Pavia, Pisa, Roma, Torino); a 6 RR. Scuole d'Ingegneria (Bologna, Napoli, Padova, Palermo, Pisa, Roma); ad una Regia Scuola Superiore d'Architettura (Roma) e mediante convenzione con Enti concorre al mantenimento di 11 Regie Università (Bari, Catania, Firenze, Macerata, Messina, Milano, Modena, Parma, Perugia, Sassari, Siena); di 2 Regie Scuole d'Ingegneria (Milano, Torino); di 1 R. Scuola di Chimica industriale (Bologna) e di una R. Scuola d'Ingegneria Navale (Genova).

Esistono anche Università ed Istituti Superiori liberi (Università di Cambrino, Ferrara, Urbino, Università Cattolica del Sacro Cuore in Milano e Istituto Superiore di scienze sociali « Cesare Alfieri » di Firenze), mantenuti da Enti locali e parificati in ogni effetto alle Università ed agli Istituti Superiori regi. Esse si uniformano alle norme fondamentali che regolano le Università e gli Istituti di Stato.

Hanno funzione e grado di Istituti Universitari, ma sono retti da speciali norme, gli Istituti Superiori di Magistero, regi o pareggiati, che hanno il compito :

a) di compiere la cultura dei licenziati dagli Istituti Magistrali preparando ad impartire insegnamenti di filosofia e pedagogia negli Istituti Magistrali e di discipline letterarie nelle Scuole Medie;

b) di abilitare gli insegnanti delle pubbliche scuole elementari all'ufficio di Direttore didattico e d'Ispettore scolastico.

Esistono, infine, Istituti Superiori che hanno carattere prevalentemente professionale e dipendono non dal Ministero della P. Istruzione, ma da altri Ministeri. Particolare importanza hanno tra questi Istituti gli Istituti Superiori di Commercio, gli Istituti di Medicina Veterinaria, gli Istituti Superiori di Agraria, tutti dipendenti dal Ministero dell'Economia Nazionale e retti da speciali disposizioni, che peraltro si modellano su quelle stabilite per gli Istituti Superiori dal Ministero della P. I.

Ogni Università o Istituto Superiore ha un proprio Statuto, approvato con R. Decreto su proposta del Senato Accademico, uditi il Consiglio d'Amministrazione e le Facoltà o Scuole che compongono l'Università, e per gli Istituti Superiori su proposta del Consiglio della Scuola, udito il Consiglio di Amministrazione.

Lo Statuto stabilisce l'organizzazione didattica, determinando per ciascuna Università od Istituto le Facoltà o Scuole che ne fanno parte, le materie d'insegnamento, il loro ordine ed il modo in cui debbono essere impartite.

Gli insegnamenti sono coordinati in modo da costituire Facoltà o Scuole. Oltre le Facoltà e le Scuole tradizionali (Facoltà di Giurisprudenza, di Medicina e Chirurgia, di Lettere e Filosofia, di Scienze Matematiche, Fisiche e Naturali, Scuole d'Ingegneria e di Farmacia) possono essere costituite Facoltà e Scuole dirette a fini speciali e Scuole di perfezionamento.

L'anno accademico comincia il 16 ottobre e termina il 31 luglio. Il periodo delle lezioni comincia non più tardi del 5 novembre e termina il 15 giugno.

Immatricolazione ed Iscrizione ai corsi. — Coloro che hanno superato l'esame di maturità per i provenienti dal liceo classico possono essere iscritti quali studenti, presso ogni Facoltà o Scuola. Coloro invece che hanno

superto l'esame di maturità per i provenienti dal Liceo Scientifico possono essere iscritti, quali studenti, soltanto presso le Facoltà di Medicina e Chirurgia, Scienze Matematiche, Fisiche e Naturali e presso le Scuole di Farmacia, d'Ingegneria e Architettura.

Chi aspira ad ottenere l'immatricolazione in una Università o Istituto Superiore deve entro il 5 novembre presentare domanda in carta legale al Rettore o Direttore indicando :

- a) nome dei genitori ;
- b) luogo di nascita ;
- c) residenza di famiglia ;
- d) abitazione dello studente nella città, sede de l'Università o Istituto.

e) Facoltà o Scuola a cui intende iscriversi.

La domanda deve essere corredata dei seguenti documenti :

- 1° certificato di nascita, debitamente legalizzato ;
- 2° diploma di maturità ;
- 3° quietanze del pagamento della tassa d'immatricolazione, della prima rata della tassa annuale d'iscrizione e della prima rata della soprattassa annuale per esami di profitto.

Per l'iscrizione ad un anno successivo al primo occorre farne domanda al Rettore o Direttore, corredata delle quietanze del pagamento dell prima rata della tassa annuale d'iscrizione e della prima rata della soprattassa annuale per esami di profitto.

I cittadini italiani residenti all'estero, gli italiani non regni col e gli stranieri possono essere ammessi presso le Università e gli Istituti Superiori all'anno di corso per il quale siano ritenuti sufficienti i titoli di studio conseguiti all'estero.

Tale giudizio spetta per le Università al Senato Accademico, udita la Facoltà o Scuola competente, e per gli Istituti al Consiglio della Scuola.

Per giova si di tale disposizione gli interessati debbono presentare al Rettore dell'Università o Direttore dell'Istituto :

- a) domanda d'immatricolazione e d'iscrizione alla Facoltà o Scuola per l'anno di corso cui aspirano ;
- b) documenti comprovanti gli studi secondari compiuti all'Estero e gli studi eventualmente compiuti e gli esami sostenuti presso Università o Istituti superiori esteri ;
- c) un esposto documentato contenente esatte informazioni circa la natura ed il valore degli studi compiuti e dei titoli conseguiti all'esteri ;
- d) qualsiasi altro titolo o documento che credano utile presentare nel loro interesse.

Tanto l'attestato degli studi quanto la fede di nascita, che devono essere uniti alla domanda, occorre sian legalizzati dal Consolo italiano del luogo in cui sono stati rilasciati, e autenticati dal Ministero degli Esteri del Regno d'Italia.

Gli studenti che provengano da Università o Istituti Superiori esteri e intendano frequentare uno o più corsi in Università o Istituti Superiori italiani, possono ottenere l'iscrizione a corsi singoli, presentando soltanto il libretto o altro documento dell'Università o Istituto da cui provengano.

Gli studenti iscritti a corsi singoli, in base alle predette norme possono ottenere un certificato degli studi compiuti, e, in seguito a prove d'esami determinate dal Consiglio di Facoltà o Scuola, anche un attestato speciale del profitto riportato.

Durata degli studi. — Esami. — Tasse. — Gli studi universitari durano 4 anni per la laurea in Giurisprudenza, in Filosofia o in Lettere, in Scienze Matematiche, Fisiche, e Naturali ; 6 per la laurea in Medicina e Chirurgia ; 5 per la laurea in Chimica e Farmacia ; 4 per diploma professionale di Farmacista ; 5 per la laurea in Ingegneria ; 5 per la laurea in Architettura ; 5 per la laurea in Chimica Industriale.

Gli esami sono di profitto e di laurea o diploma ; quelli di profitto si sostengono non per ogni singola materia ma per gruppi di esse, secondo stabiliscono gli statuti di ciascuna Università. Quelli di laurea o diploma si sostengono alla fine del corso e sono ordinati in modo da accertare la maturità intellettuale del candidato.

Le lauree e i diplomi rilasciati dalle Università e dagli Istituti Superiori

hanno esclusivamente valore di qualifiche accademiche e coloro che ne sono in possesso debbono, per essere abilitati all'esercizio professionale, superare il relativo esame di Stato.

L'esame di Stato si svolge in unica sessione annua nel mese di novembre. Agli stranieri è concessa la dispensa dal pagamento della metà delle tasse e sopratasse scolastiche.
